P.O. BOX 119, HONOLULU, HAWAI'I 96810-0119 Ph: (808) 586-6000 | Fax: (808) 586-1922 FTS HAWAII GOV

March 16, 2022

The Honorable Ronald D. Kouchi,
President, and
Members of The Senate
Thirty-First State Legislature
Hawaii State Capitol, Room 409
Honolulu, Hawaii 96813

The Honorable Scott K. Saiki, Speaker, and Members of The House of Representatives Thirty-First State Legislature Hawaii State Capitol, Room 431 Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

Pursuant to HRS section 27-43.6, which requires the Chief Information Officer to submit applicable independent verification and validation reports to the Legislature within ten days of receiving the report, please find attached the report the Office of Enterprise Technology Services received for the State of Hawaii Department of Human Services' Systems Modernization Project.

In accordance with HRS section 93-16, this report may be viewed electronically at http://ets.hawaii.gov (see "Reports").

Sincerely,

Douglas Murdock Chief Information Officer

State of Hawai'i

Attachment (2)

Hawaii Department of Human Services Systems Modernization Project

Final IV&V Status Report for Reporting Period: February 1 – 28, 2022

Submitted: March 14, 2022

Overview

- Executive Summary
- IV&V Findings and Recommendations
- IV&V Engagement Status
- Appendices
 - A IV&V Criticality Ratings
 - B Risk Identification Report
 - C Acronyms and Glossary
 - D Background Information

Executive Summary

Executive Summary

During this reporting period, the BES Project Team continued to revise the BI-5 Project Schedule. While completion was planned in February, two significant issues remain:

- Identifying the number of concurrent design sprints that the project team can effectively manage.
- Determining the duration of the Final Acceptance Testing activity.

IV&V is concerned about the continued schedule delays. Significant project delays impact morale. Schedule challenges are compounded as resources leave the project and/or get redirected. In this reporting period, IV&V opened a preliminary concern related to the availability of DHS staff and their continued involvement on the BES Project. Several DHS resources recently left the Project, and not all positions have been backfilled. IV&V is also concerned that staff burnout will cause more resources to leave the Project. To address this concern, DHS and the ASI are engaging the OCM team and planning team building activities.

On a positive note, the project team piloted the revised Design Sprint process this month. They quickly identified lessons learned and adjusted the process to include unique aspects of some functional areas (e.g., reports, client correspondence, interfaces). While the results of the pilot are encouraging, IV&V remains concerned with the project team's capacity to support the plan for additional concurrent design sprints.

Dec	Jan	Feb	Category	IV&V Observations
Н	Н	Н	Project Management	DHS and the ASI continue working towards approving the revised schedule, although significant differences remain. The ASI had provided a detailed Data Conversion dashboard to track progress, which resulted in the related finding being retired. Three of the nine findings in this category remain at a high criticality rating, resulting in this category remaining high since July 2020 (20 months).

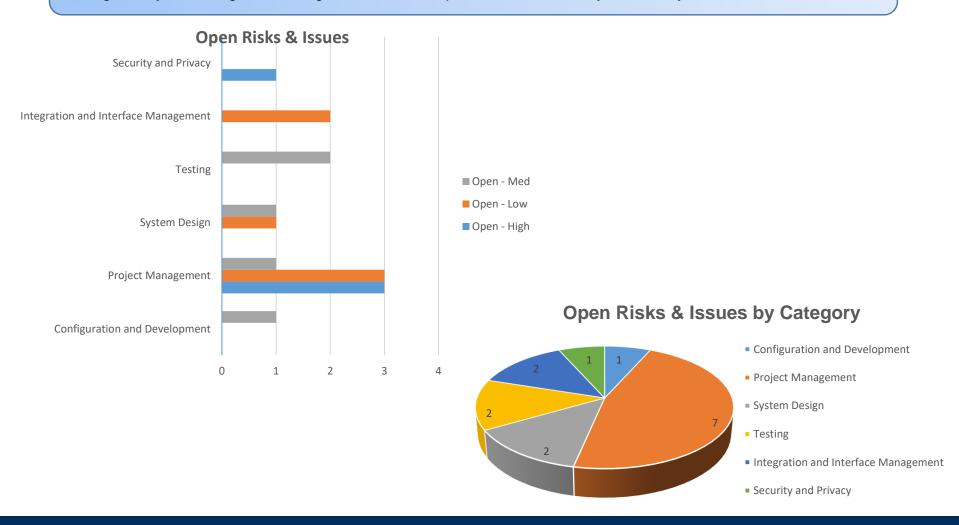

Executive Summary

Dec	Jan	Feb	Category	IV&V Observations
M	M	M	System Design	The revised system design process is engaging more of the project team earlier in the design sprints. IV&V will monitor the results to determine if fewer design questions and concerns are uncovered late in the process.
M	M M Configuration currently conducting a lessons learned exercise to identify potential efficiencies for futi		The project team adopted the revised SDLC Design process in this reporting period and is currently conducting a lessons learned exercise to identify potential efficiencies for future design sessions. IV&V is concerned that the process may be resource intensive for DHS, which may impact productivity levels in the near term.	
M	strategies to allow testing of interfaces. This progress has resulted in IV&V reducing criticality rating of this category to Low. IV&V will continue to monitor as the integrated developed/tested. There are no material changes to the Testing category in this reporting period. IV&V		The ASI has moved integration tasks to earlier releases and incorporated mitigation strategies to allow testing of interfaces. This progress has resulted in IV&V reducing the criticality rating of this category to Low. IV&V will continue to monitor as the integrations are developed/tested.	
M			There are no material changes to the Testing category in this reporting period. IV&V will review the testing metrics in greater detail when additional testing occurs. IV&V also awaits ASI progress on the ADA compliance tool.	
		DHS and the ASI continue to implement-security controls. IV&V is maintaining a high criticality rating for this category due to the importance of completing this effort.		

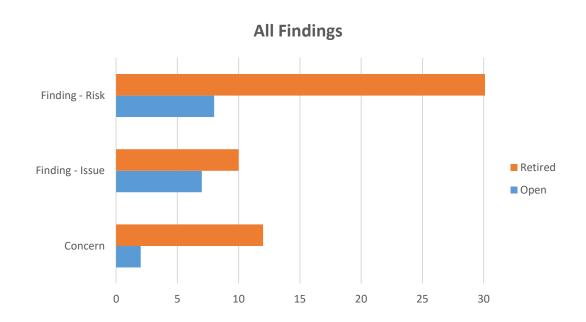

As of the February 2022 reporting period, PCG is tracking 15 open findings (8 risks and 7 issues) and has retired a total of 54 findings. Of the 17 open findings, 7 are related to Project Management, 2 in Integration and Interface Management, 2 in Testing, 2 in System Design, 1 in Configuration and Development, and 1 in Security and Privacy.

The following figure provides a breakdown of <u>all</u> IV&V findings (risks, issues, concerns) by status (open, retired).

Findings Retired During the Reporting Period

#	Finding	Category
	Risk – The inability to measure and report the overall Data Conversion work effort and progress may lead to schedule slippage.	
72	The ASI implemented an approach and process to accurately report the status of Data Conversion; therefore, this finding is retired.	Project Management
	IV&V will continue to monitor the data conversion efforts.	
	Risk – Lack of DHS BESSD staff with expansive business knowledge could lead to a BES solution design that falls short of the DHS business needs.	
65	Over the last several months DHS staff have been providing sufficient knowledge and expertise as needed. During the pilot of the new design processes, DHS Subject Matter Experts (SMEs) and staff with business knowledge were able to provide feedback and input to complete the design sprints. Because DHS has been providing SMEs with sufficient knowledge consistently, IV&V is retiring this finding. IV&V has opened a related new preliminary concern to monitor DHS staff availability in finding #76.	Project Management

Preliminary Concerns Investigated During the Reporting Period

#	Finding	Category
70	Insufficient configuration management could lead to development confusion and reduce the effectiveness of defect resolution. No material update for this reporting period.	Configuration and Development
76	Volunteer DHS resources leaving the Project can lead to schedule delays, lower morale, and burnout. Observation – The DHS resources assigned to work with the ASI on the BES Project are all volunteers except one. Resources are not in dedicated roles within the team and have the option of returning to their previous operational roles at any time. Significance – The replacement of DHS resources in project roles (e.g., testers and product owners) is not guaranteed and DHS already stated that no additional resources will be assigned to the test team. It is a risk to the Project that the remaining DHS resources will be overallocated, risking burnout, and creating a cycle of more DHS resources leaving the Project. If additional DHS staff are provided, their training will add to the workloads of current DHS project resources.	Project Management

Findings Opened During the Reporting Period

#	Finding	Category
	None	

#	Key Findings	Criticality Rating
2	Issue – Late Delivery of project deliverables has caused schedule delays. The updated target for DHS to approve the project schedule is early March 2022. To minimize further schedule and deliverable delays, the project team implemented update meetings for each of the major BES modules where detailed tasks and deliverable due dates are reviewed and mitigation actions identified, if necessary.	Н

Recommendations	Progress
DHS and the ASI agree to a revised schedule against which project deliverables can be managed.	In process
 Despite not yet having a revised baseline schedule, continue monitoring and analyzing deliverables that may have impact to the critical path. 	In process

#	Key Findings	Criticality Rating
29	Issue – Uncertainty and/or a lack of communication around long-term architecture decisions could impact the project budget, schedule, system design, and planning decisions. IV&V remains concerned that details of the proposed change requests have not been fully communicated to all project stakeholders. If DHS is unable to fund these changes, stakeholders could be left with little time to respond if exclusions are discovered late into the development phase. The ASI has stated they are close to onboarding a new lead architect; however, this resource will likely roll off the Project after 6 months.	L

Recommendations	Progress
DHS should finalize the Portal strategy and communicate the strategy with the stakeholders and project teams.	In process
 The Project should continue to vet possible architectural change impacts to the platform (e.g., ADA, Configuration Management tools), M&O, MQD, and BES systems before finalizing architectural decisions. 	In process
 DHS continue to request ASI perform due diligence in any recommendation for foundational architecture change decisions and continue to review with appropriate DHS stakeholders to assure a common understanding of the implications of these decisions. 	In process
 The Project should continue to ensure communication between development leads and architecture leads to assure optimal collaboration on possible architecture changes that could impact decisions in each area. 	In process
 Maintain current communication processes to ensure regular communication between the architecture team and the rest of the project team to assess impacts of architecture decisions to the Project. 	In process

#	Key Findings	Criticality Rating
	Issue – DHS PMO project team members have transitioned off the Project, which may cause gaps in knowledge transfer and leadership on the Project.	
43	DHS posted the PMO positions but are having difficulty identifying candidates. While online metrics show there is interest and the positions are being viewed, as of the date of this report, there has only been one applicant.	Н

F	Recommendations	Progress
•	DHS continue to work with the appropriate organizations to identify the funds necessary to fill these positions.	In process
•	DHS consider other options (Contractors, State employees borrowed from other agencies) to fill these positions if there is ongoing difficulty in finding permanent hires.	Not Started

#	Key Findings	Criticality Rating
	Risk – The COVID-19 pandemic and the related "stay at home" order could hinder project activities and negatively impact the project schedule and budget.	
47	The State of Hawaii is planning on eliminating most COVID mandates as of 3/5/22. In-person meetings could improve collaboration for design and other sessions if the Project elects to increase in-person meetings.	

Recommendations	Progress
 Suggest the Project and DHS create a detailed, documented risk mitigation strategy and plan that is reviewed regularly and revised to address the current state of the COVID-19 threat and related impacts over the next 6 to 12 months. The plan should include the possible economic impacts to the state budget directly related to project resources. 	In process
 Send broad communications to stakeholders to assure clear understanding of changes to the Project with this regard to impacts of COVID as well as clarifying communications as to what will remain the same. 	In process
 Project leadership continue to encourage independent phone conversations to enhance and accelerate communications, and for team members not wait for meetings to converse. 	In process

#	Key Findings	Criticality Rating
	Issue – Poor quality project deliverables may impact system design, testing artifacts and the project schedule.	
49	IV&V continues to review the Release 0.6 test results and available metrics. The initial results show a positive trend, which is encouraging since Release 0.6 has the most complex functionality developed and tested by the project team to date. If the number of defects attributed to design remain low throughout Release 0.6 testing, the focus of this finding will be addressed.	L

Recommendations	Progress
 ASI review the Quality Management Plan to ensure that the Project is working within the Quality guidelines. In particular, the ASI should evaluate and consider if it is in alignment with Section 3.1.2 Measure Project Quality, which states "ASI measures process and product quality by 1) selecting BES implementation process and product attributes to measure; 2) selecting component activities to measure; 3) defining value scales for each component activity; 4) recording observed activity values; and 5) combining the recorded attribute values into a single number called a process quality index." IV&V has not seen evidence indicating the ASI is utilizing metrics to measure its process and product quality. 	Not Started
ASI verify that the information in design and testing artifacts is kept in sync and consistent.	In process

#	Key Findings	Criticality Rating
71	Risk – The lack of the final agreement on the scope and costs of the GCP Change Request (CR) may lead to unanticipated DHS costs, schedule delays, and/or the need to reduce scope. IV&V has requested a copy of the GCP change request from the DHS Enterprise Technology Officer. When received, IV&V will review the GCP CR and provide comments.	M

Recommendations	
 The ASI should document the current environment M&O activities to ensure all activities are known with a clear understanding of the "AS IS" and "TO BE" model for services beginning with the DDI, through Pilot/Implementation and M&O. 	In process
 The ASI clearly document the scope of work and cost for the GCP CR during DDI and M&O and provide to DHS for approval. 	In process

#	Key Findings	Criticality Rating
	Risk – The lack of a BES project schedule based on accurate estimations diminishes effective planning and resource management, which could result in late deliverables, cost increases, and a late go-live.	
74	The updated target for DHS to approve the project schedule is early March 2022. The ASI provided a (version 20) draft schedule but is adjusting the schedule to increase the length of Final Acceptance Testing and accommodate the estimated capacity of DHS resources during the Design Sprints. Even with a less aggressive Design Sprint schedule, it remains unclear if the Project will be able to meet the revised dates due to the:	Н
	 complexity of the design sprint process, availability of DHS SMEs and POs when needed, and Participant ability to competently perform their respective Design Sprint roles. 	

Recommendations	Progress
 Using the available tools, review the current estimates to complete each activity compared to past actual hours. 	In process
 Update as necessary and provide the DHS/ASI Project Managers with reports and data that accurately reflect the DHS/ASI resource needs along with over/under allocations of staff for the duration of the Project. 	In process
Develop mitigation and contingency plans that are tracked/managed by DHS/ASI for all tasks that are behind schedule or are at risk of being behind schedule which includes resource management.	In process
 Discuss, validate and address additional concerns within the project processes that may cause the project delays other than inaccurate estimates such as over reliance on POs, slow design sprints, and cadence of development teams. 	In process

Integration and Interface Management

#	Key Findings	Criticality Rating
	Risk – System Integration of the BES Modules (CMM, FMM, SSP) will be developed in the later releases vs. a continuous integration model within each release which may cause schedule delays.	
60	The ASI plans to schedule integration tasks earlier in the project schedule and to 'stub' out integration interfaces that return relevant data that could mitigate this risk to some extent, therefore, IV&V is reducing the criticality rating of this finding to 'Low'.	L
	Note: 'Stubbing' out interfaces can be an effective mitigation strategy when the implemented interfaces return sample data that can be consumed by calling modules during testing.	

Recommendations	
 Prioritize the build and testing of integration points to assure integrations (through early end- expectations throughout development instead of waiting to perform them for the first time as 	in hrochee
The ASI plan and communicate the mitigation strategy for handling risks associated with the approach.	ir integration In process

Integration and Interface Management

#	Key Findings	Criticality Rating
63	Risk – The lack of early planning and coordination with interface partners may result in schedule delays. There were no changes to the interface communication plans in this reporting period.	L

Recommendations	Progress
Identify and document all interface partners' contacts.	In process
Complete all MOAs and obtain approval.	In process
Confirm testing dates with interface partners in writing.	In process

Configuration and Development

#	Key Findings	Criticality Rating
16	Issue – Lack of clear understanding of the DDI approach may reduce effectiveness of all SDLC Processes. IV&V remains concerned that the new SDLC process may become resource intensive for DHS SMEs, who may struggle with implementation, which could hinder productivity and lead to schedule delays.	M

Recommendations	Progress
 ASI make available their DDI approach documentation/materials for stakeholders to review and/or refresh their knowledge on demand. 	In process
 The Project monitor DHS product owner productivity, ability/willingness to provide effective feedback to the ASI for design and other important decisions and provide coaching as needed to assure their effectiveness in their role. 	In process

System Design

#	Key Findings	Criticality Rating
	Issue – Poorly executed JAD and "design sessions" could lead to inaccurate design and rework.	
61	The Project adopted the recommendation to include DHS SMEs in the design process. DHS and IV&V have observed improved DHS/ASI team collaboration and design session results. IV&V notes that DHS may be assuming more responsibility than expected by leading some of the design sessions. The next step is to observe/review the results of the sprint prototypes to determine if the number of key issues raised by stakeholders are reduced.	M

Recommendations			
 JAD and design sessions should be led by experienced senior BAs, with goals, objectives and results communicated to all participants. 	In process		
 The facilitator should use their expertise to drive discussions through leading questions. 	In process		
 The DHS and ASI product owners should actively participate to ensure the system meets the requirements, designed taking advantage of new technology and aligns to the 'to be' business process. 	In process		
 The ASI should back-track significant differences in design direction to determine the root cause to identify these items as early in the SDLC as possible. 	In process		
 ASI and DHS should work together to vet the in-progress design with all SMEs for the area of focus. 	Complete		

System Design

#	Key Findings	Criticality Rating
	Risk – The planned BES infrastructure is complex which could be difficult to implement and maintain and could lead to schedule/cost impacts	
73	The ASI is onboarding their replacement Lead Architect in the coming weeks. The ASI has stated that the infrastructure, while complex, is sufficiently understood and manageable. The revised project schedule provides additional time to implement the BES infrastructure and could mitigate the risk of infrastructure delays. IV&V is lowering the criticality rating to 'Low'.	L

Recommendations			
ASI clearly communicate the potential costs and schedule impacts to implementing the planned infrastructure.	In process		
 DHS work with the ASI to assess the potential challenges of maintaining a complex environment and consider scaled back options that could reduce this risk and reduce long-term support costs. 	In process		
 ASI develop a process to closely monitor cloud and other product changes (software updates/new releases), manage changes, and regression test once updates are applied. 	In process		

Testing

#	Key Findings	Criticality Rating
66	Issue – The number of issues/defects found during testing may cause planned work in the future sprints to be delayed due to the resolution and retesting of issues/defects. The Project is monitoring Integration (INT) and System Integration Testing (SIT) defects, and the trend appears to be positive. The number of defects reported in SIT is much less than in INT, which is the	M
	expected trend. Additionally, the correction of defects appears to be timely and progressing positively. The go/no-go decision to move to future releases has not been held up because of a defect threshold greater that twenty percent. IV&V will continue to monitor the number of defects identified for future releases and the trending of defect leakage from INT to SIT.	

Recommendations				
 Adjust the project plan and provide reasonable scope for SIT in subsequent releases taking into accommumber of defects and testing time needed. 	ount the In process			
The ASI should report testing metrics and DHS should monitor this Key Performance Indicator (KPI)	. Complete			
 If defect leakage worsens in the future releases, the ASI should consider a Root Cause Analysis (RODHS and IV&V to identify and take corrective actions. 	CA) with In process			

Testing

#	Key Findings			
	Risk - The Americans With Disabilities Act (ADA) Section 508 compliance tool has not been installed for the Project, which may cause significant rework.			
67	The ASI team identified a new ADA tool to conduct 508 compliance testing. While a demonstration is planned to confirm the tool can work with the BES architecture, the ASI has stated that if an appropriate ADA tool is not found, a manual ADA testing effort will be conducted along with the ASI's use of an accessibility validation tool used during development.	M		

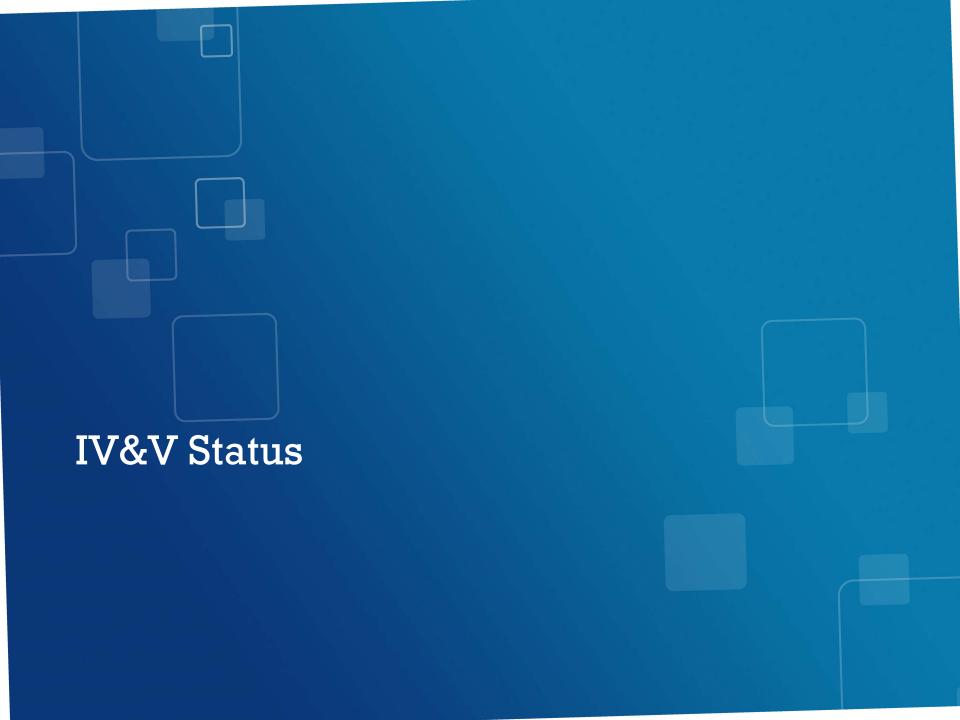

Recommendations	Progress				
The ADA tool meets contractual and project requirements.					
The ASI communicates a plan for ADA test execution.					
 The ASI communicates how the tool will be used to report compliance and non-compliance and how non-compliance will be addressed/corrected 	In process				
The ASI communicates how and when DHS/IV&V will be provided the reports from the ADA tool execution and how to interpret the results.	In process				

Security and Privacy

#	Key Findings			
	Risk - Insufficient planning/execution of the BES Security Plan activities may lead to delays in gaining Federal Partner approval for the BES to begin the Pilot Phase.			
68	DHS and the ASI continue to populate the in-scope controls. There is renewed discussion regarding the use of Rev 5 controls as required by the IRS, while Rev 4 controls are required by FNS. DHS continues to determine the FNS requirements for go live and FNS' timelines for security approval.	Н		

Recommendations					
The ASI continue to develop the BI-13 Security Plan in close collaboration with DHS.					
 DHS and the ASI agree upon the tools and process that will be used to document and track security control implementation, if not included in the BI-13 Security Plan. The process should define the level of detail needed to track progress (estimates, target dates, risks, issues, evidence) along with the Requirement Traceability Matrix. 	In process				
 ASI, per DHS guidance, should begin to pivot toward the adoption of 800-53 Rev 5 since Rev 4 will be obsolete when the system goes live. 	In process				

IV&V Engagement Status

IV&V Engagement Area	Dec	Jan	Feb	Comments
IV&V Budget				
IV&V Schedule				
IV&V Deliverables				PCG submitted the final January IV&V Monthly Status Report.
IV&V Staffing				Jeremy Riley has departed the project as IV&V Security SME and Dustin Heath has been approved to fill this role.
IV&V Scope				PCG continues discussions with DHS about extending our contract end-date and exercising the first two-year option.

Engagement Status Legend							
The engagement area is within acceptable parameters.		The engagement area is somewhat outside acceptable parameters.		The engagement area poses a significant risk to the IV&V project quality and requires immediate attention.			

IV&V Activities

- IV&V activities in the February reporting period:
 - Completed January Monthly Status Report
 - Ongoing Review the BES Project Artifacts and Deliverables
 - Ongoing Attend BES Project meetings, (see <u>Additional Inputs</u> pages for details)
 - Reviewed available ASI Original Contract and BES Optimization contract amendment documentation
- Planned IV&V activities for the March reporting period:
 - Ongoing Observe BES Design and Development sessions as scheduled
 - Ongoing Observe Bi-Weekly Project Status meetings
 - Ongoing Observe Weekly Architecture meetings
 - Ongoing Observe Weekly Security meetings
 - Ongoing Observe Agile Development meetings
 - Ongoing Monthly IV&V findings meetings with the ASI
 - Ongoing Monthly IV&V Draft Report Review with DHS, ETS and ASI
 - Ongoing Participate in weekly DHS and IV&V Touch Base meetings
 - Ongoing Review BES artifacts and deliverables

Deliverables Reviewed

Appendix A – IV&V Criticality Ratings

Criticality Rating	Definition
Н	A high rating is assigned if there is a possibility of substantial impact to product quality, scope, cost, or schedule. A major disruption is likely, and the consequences would be unacceptable. A different approach is required. Mitigation strategies should be evaluated and acted upon immediately.
M	A medium rating is assigned if there is a possibility of moderate impact to product quality, scope, cost, or schedule. Some disruption is likely, and a different approach may be required. Mitigation strategies should be evaluated and implemented as soon as feasible.
L	A low rating is assigned if there is a possibility of slight impact to product quality, scope, cost, or schedule. Minimal disruption is likely, and some oversight is most likely needed to ensure that the risk remains low. Mitigation strategies should be considered for implementation when possible.

Appendix B – Findings Log

The complete Findings Log for the BES Project is provided in a separate file.

Appendix C – Acronyms and Glossary

Acronym	Definition
APD	Advance Planning Document
ASI	Application System Integrator
BES	Benefits Eligibility Solution
CCWIS	Comprehensive Child Welfare Information System
CM	Configuration Management
CMMI	Capability Maturity Model Integration
CMS	Center for Medicare and Medicaid Services
CR	Change Request
DDI	Design, Development and Implementation
DED	Deliverable Expectation Document
DHS	Hawaii Department of Human Services
DLV	Deliverable
E&E	Eligibility and Enrollment
EA	Enterprise Architecture
ECM	Enterprise Content Management (FileNet and DataCap)
ESI	Enterprise System Integrator (Platform Vendor)
ETS	State of Hawaii Office of Enterprise Technology Services
FIPS	Federal Information Processing Standard
HIPAA	Health Information Portability and Accountability Act of 1996
IDM	Identity and Access Management (from KOLEA to State Hub)
IEEE	Institute of Electrical and Electronics Engineers
IES	Integrated Eligibility Solution
ITIL	Information Technology Infrastructure Library

Appendix C – Acronyms and Glossary

Acronym	Definition
IV&V	Independent Verification and Validation
KOLEA	Kauhale On-Line Eligibility Assistance
M&O	Maintenance & Operations
MEELC	Medicaid Eligibility and Enrollment Life Cycle
MEET	Medicaid Eligibility and Enrollment Toolkit
MOU	Memorandum of Understanding
MQD	Hawaii Department of Human Services MedQuest Division
NIST	National Institute of Standards and Technology
OE	Operating Environment
OIT	Department of Human Services Office of Information Technology
PIP	Performance/Process Improvement Plan
PMBOK®	Project Management Body of Knowledge
PMI	Project Management Institute
PMO	Project/Program Management Office
PMP	Project Management Plan
QA	Quality Assurance
QM	Quality Management
RFP	Request for Proposal
ROM	Rough Order of Magnitude
RMP	Requirements Management Plan
RTM	Requirements Traceability Matrix
SEI	Software Engineering Institute
SLA	Service-Level Agreement
SME	Subject Matter Expert

Appendix C – Acronyms and Glossary

Acronym	Definition
SOA	Service Oriented Architecture
SOW	Statement of Work, Scope of Work
VVP	Software Verification and Validation Plan
XLC	Expedited Life Cycle

Appendix D – Background Information

Systems Modernization Project

The DHS Enterprise Program Roadmap includes contracting with three separate vendors with the following high-level scope:

- ESI or Platform Vendor responsible for the shared technology and services required for multiple Application vendors to implement and support functionality that leverages the DHS Enterprise Platform.
- ASI or ASI Vendor responsible for the DDI of the Benefits Eligibility Solution (BES Project) enhancing the currently implemented Medicaid E&E Solution (KOLEA) and providing support for the combined Solutions.
- CCWIS Vendor responsible for the DDI of the CCWIS Solution to meet the needs of child welfare services and adult protective services (CCWIS Project) and providing support for the Solution.

Systems Modernization IV&V Project

IV&V performs objective assessments of the design, development/configuration and implementation (DDI) of DHS' System Modernization Projects. DHS has identified three high-risk areas where IV&V services are required:

- Transition of M&O from DHS' incumbent vendor to the ESI and ASI vendors
- BES DDI
- CCWIS DDI

On the BES DDI Project, IV&V is responsible for:

- Evaluating efforts performed by the Project (processes, methods, activities) for consistency with federal requirements and industry best practices and standards
- Reviewing or validating the work effort performed and deliverables produced by the ASI vendor as well as that of DHS to ensure alignment with project requirements
- Anticipating project risks, monitoring project issues and risks, and recommending potential risk mitigation strategies
 and issue resolutions throughout the Project's life cycle
- Developing and providing independent project oversight reports to DHS, ASI vendors, State of Hawaii Office of Enterprise Technology Services (ETS) and DHS' Federal partners

Appendix D – Background Information

What is Independent Verification and Validation (IV&V)?

- Oversight by an independent third party that assesses the Project against industry standards to provide an unbiased view to stakeholders
- The goal of IV&V is to help the State get the solution they want based on requirements and have it built according to best practices
- IV&V helps improve design visibility and traceability and identifies (potential) problems early
- IV&V objectively identifies risks and communicates to project leadership for risk management

PCG's Eclipse IV&V® Technical Assessment Methodology

- Consists of a 4-part process made up of the following areas:
 - 1. **Discovery** Discovery consists of reviewing documentation, work products and deliverables, interviewing project team members, and determining applicable standards, best practices and tools.
 - 2. Research and Analysis Research and analysis is conducted in order to form an objective opinion.
 - 3. Clarification Clarification from project team members is sought to ensure agreement and concurrence of facts between the State, the Vendor, and PCG.
 - **4. Delivery of Findings** Findings, observations, and risk assessments are documented in this monthly report and the accompanying Findings and Recommendations log. These documents are then shared with project leadership on both the State and Vendor side for them to consider and take appropriate action on.

IV&V Assessment Categories for the BES Project

- Project Management
- Requirements Analysis & Management
- System Design
- Configuration and Development
- Integration and Interface Management

- Security and Privacy
- Testing
- OCM and Knowledge Transfer
- Pilot Test Deployment
- Deployment
