DAVID Y. IGE GOVERNOR

DOUGLAS MURDDOCK CHIEF INFORMATION OFFICER

OFFICE OF ENTERPRISE TECHNOLOGY SERVICES

P.O. BOX 119, HONOLULU, HAWAI'I 96810-0119 Ph: (808) 586-6000 | Fax: (808) 586-1922 ETS.HAWAII.GOV

July 5, 2022

The Honorable Ronald D. Kouchi, President, and Members of The Senate Thirty-First State Legislature Hawaii State Capitol, Room 409 Honolulu, Hawaii 96813 The Honorable Scott K. Saiki, Speaker, and Members of The House of Representatives Thirty-First State Legislature Hawaii State Capitol, Room 431 Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

Pursuant to HRS section 27-43.6, which requires the Chief Information Officer to submit applicable independent verification and validation (IV&V) reports to the Legislature within ten days of receiving the report, please find attached the IV&V report the Office of Enterprise Technology Services received for the State of Hawaii Department of Labor& Industrial Relations Disability Compensation Division's Modernization Project – Electronic Case Management System.

In accordance with HRS section 93-16, this report may be viewed electronically at <u>http://ets.hawaii.gov</u> (see "Reports").

Sincerely,

DOUGLAS MURDOCK Chief Information Officer State of Hawai'i

### **EXECUTIVE SUMMARY**

#### BACKGROUND

The State of Hawaii (State), Department of Labor and Industrial Relations (DLIR) contracted DataHouse Consulting, Inc. (DataHouse) for the Disability Compensation Division's (DCD) Electronic Case Management System Project (eCMS Project). DLIR contracted Accuity LLP (Accuity) to provide Independent Verification and Validation (IV&V) services for the eCMS Project.

The Initial On-Site IV&V Review Report (IV&V Initial Report) was issued on August 30, 2019 and provided an initial assessment of project health as of June 30, 2019. Refer to the full Initial Report for additional background information on the eCMS Project and IV&V. The Monthly On-Site IV&V Review Reports (IV&V Monthly Reports) built upon the Initial Report to update and continually evaluated project progress and performance. Refer to Appendix E: Prior IV&V Reports for a listing of prior reports. Although the project is not yet complete, this Final On-Site IV&V Review Report summarizes the cumulative project progress and performance and also includes the key lessons learned throughout the project to-date.

The focus of our IV&V activities for this report included an assessment of system development, design, and integration and schedule management. IV&V has limited visibility or access to project activities and documentation that may prevent a complete identification of project risks with regards to DataHouse development, testing, data conversion, security and configuration management, system transition, and M&O activities.

The IV&V Dashboard on the following two pages provides a quick visual and narrative snapshot of both the project status and project assessment as of May 31, 2022. Additional explanation is included in Findings and Recommendations by Assessment Area for new findings and in Appendix D: Prior Findings Log for prior report findings. Refer to Appendix A: IV&V Criticality and Severity Ratings for an explanation of the ratings.

ACTUAL PROGRESS \*\* As of 05/24/22. IV&V unable to verify %.

## ASSESSMENT AREA & RATINGS SUMMARY

AS OF MAY 31, 2022

MAR	APR	MAY	IV&V ASSESSMENT AREA	IV&V OBSERVATIONS
R	R	R	Overall	Although the project schedule was re-baselined last month, Phase 1 Case Management go-live will be deferred again. Incremental progress continues to be made, but has not been enough to break the continuous cycle of delays. Unless DLIR and DataHouse work together to make significant changes, the number of outstanding project risks and issues will continue to impair project performance and may impact DCD operations.
				<i>Project Schedule</i> : Phase 1 Case Management go-live will be deferred and there are also some delays in Phase 2 and 3 tasks. Accuity is unable to fully assess schedule variances (refer to finding 2019.07.PM13).
				<i>Project Costs</i> : Three additional procurements are expected to be executed in June 2022, including the paper scanning contract that will significantly increase the total cost of the project. DataHouse is prepaid for Phase 1 and 2 but is adjusting Phase 3 invoices under the revised payment schedule. Accuity is unable to fully assess cost variances (refer to finding 2019.07.PM12).
				<i>Quality</i> : DLIR and DataHouse continue to address system issues for Phase 1 Content Management and Phase 1 Case Management. More refined quality metrics are needed to better identify root causes, analyze trends, and inform go/no-go decisions (refer to finding 2019.07.IT05).
Y	Y		Program Governance	The eCMS Project Executive Steering Committee (ESC) continues to meet monthly but needs to play a greater role to drive progress and enforce accountability. Repeated requests for changes to project timelines have been approved without requiring root cause analysis or corrective actions given the project's ongoing delays.
R	R	R	Project Management	DLIR and DataHouse tentatively agreed to defer the Phase 1 Case Management go-live to June 30, 2022, pending ESC approval. However, there are already signs that this proposed date may still not be sufficient time to complete all planned go-live readiness tasks. Inadequate foundational project management processes have been the primary cause of project delays and issues throughout the eCMS Project to-date. In order to improve project performance, DLIR and DataHouse must make significant changes to all areas of project management (refer to Appendix D: Prior Findings Log), especially for schedule, resource, risk, requirements, and communications management.
		R	Technology	DLIR user acceptance testing (UAT) is a major hurdle for Phase 1 Case Management acceptance and go-live. Only 55% of the test cases passed and there are still unresolved issues and defects. With little time remaining even to the new proposed go-live, it is critical to perform adequate and systematic testing, resolve system and data conversion issues, establish and monitor clear go/no-go criteria, and complete transition checklist tasks in order to minimize operational risk for the Phase 1 Case Management go-live. Four months after the initial Phase 1 Content Management go-live, system issues continue to be addressed but the plan to closeout remaining issues, the root cause of issues, and system maintenance and operation (M&O) roles, procedures, and metrics remain unclear. While Phase 2 development sprints and Phase 3 design activities are in progress, improvements are still needed for many foundational technology processes (refer to Appendix D: Prior Findings Log) to prevent the reoccurrence of the same issues from Phase 1. IV&V has limited visibility in many of the DataHouse technology processes.

### FINDINGS AND RECOMMENDATIONS BY ASSESSMENT AREA

### OVERALL RATING

#### **KEY PROGRESS**

Phase 1 Case Management training **COMMENCED** 

Phase 2 development
sprints <b>PROGRESSING</b>

Phase 3 design stage **KICKED OFF** 

KEY	RISKS

Case Management SCHEDULE and OPERATIONAL risk

**INSUFFICIENT** pace of UAT completion

**SIGNIFICANT** changes needed in many areas of the project The overall rating is assigned based on the criticality ratings of the IV&V Assessment Categories and the severity ratings of the underlying findings (see Appendix A: IV&V Criticality and Severity Ratings). The tables below summarize the criticality ratings for each IV&V Assessment Category in the three major IV&V Assessment Areas. Eleven IV&V Assessment Categories declined from the prior report primarily due to time running out to complete many of the outstanding tasks critical to the Phase 1 Case Management go-live. Additionally, there was already a need to defer the recently re-baselined schedule. Unless DLIR and DataHouse work together to make significant changes, the number of outstanding project risks and issues will continue to impair project performance and may impact DCD operations.

### PROGRAM GOVERNANCE

MAR	APR	MAY	IV&V ASSESSMENT	IV&V OBSERVATION	F	INDING	S
WIAN	AFK	WIA I	CATEGORY	IVAV OBJERVATION	NEW	OPEN	CLOSED
		V	Governance Effectiveness	The eCMS Project Executive Steering Committee (ESC) continues to meet monthly but needs to play a greater role to drive progress and enforce accountability. The ESC approved the new timelines last month but Phase 1 Case Management go-live will be deferred again and there are already some delays in Phase 2 and 3 tasks. Throughout the project, repeated requests for changes to project timelines have been approved without requiring root cause analysis or corrective actions. The ESC and DLIR and DataHouse project sponsors need to provide additional support and guidance to help the project break the continuous cycle of delays (2021.05.PG01).	0	1	0
<b>V</b>	<b>V</b>	<b>V</b>	Benefits Realization	No significant updates since the prior report. Project success metrics should be reevaluated to take into consideration the current project status and to focus on what can be realistically achieved in the remaining project timeline. DLIR also needs to begin collecting and monitoring success metrics data (2019.07.PG05).	0	1	0

### PROJECT MANAGEMENT

MAR	APR	MAY	IV&V ASSESSMENT		l	FINDING	iS
IVIAR	APR	MAT	CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
R		R	Project Organization and Management	DLIR and DataHouse do not seem to be on the same page or have a clear understanding of what both parties need to do, especially with regards to the upcoming Phase 1 Case Management go-live. The new project timeline was just approved by the ESC last month and already needs to be changed. DLIR and DataHouse have a new date to propose but there are already signs that this may not be achievable. It is unclear how these proposed plans and dates are determined and reviewed to ensure they are sound. Inadequate foundational project management processes have been the primary cause of project delays and issues throughout the eCMS Project to-date. These issues will continue to impair project performance unless DLIR and DataHouse improve how they work together (2019.07.PM02) and agree on a plan to make significant changes to all areas of project management (2020.07.PM01). Improvements are also still needed for the deliverable review process (2019.07.PM03).	0	3	0

	MAD	APR	MAY	IV&V ASSESSMENT	IV&V OBSERVATION		FINDING	G
PROJECT	MAR	APR		CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
MANAGEMENTProject Organization and ManagementScope and Requirements ManagementCost, Schedule, and Resource ManagementRisk ManagementRisk ManagementOrganizational Change ManagementBusiness Process ReengineeringTraining and Knowledge Transfer	R	R	R	Scope and Requirements Management	Inadequate management of requirements is evidenced by Phase 1 UAT progress, results, and user satisfaction. DLIR's approach to address requirements issues was to develop test cases that would ensure the completeness and traceability of requirements. However, this approach identified missing requirements or issues too late in the process and it is unclear what will be addressed as part of the Phase 1 Case Management go-live. Although requirements will continue to be refined during Phase 2 and 3, significant changes in requirements management processes (2019.07.PM10) and traceability (2019.10.PM01) should be immediately implemented to prevent reoccurrence of the same issues from Phase 1. Areas for improvement include collecting and tracking requirements from sessions with end users, updating requirements documentation based on end user sessions and feedback, tracing contract requirements to requirements documentation, reviewing requirements deliverables for completeness and accuracy, and assessing during each development sprint cycle that requirements are preliminarily satisfied. This will help to ensure throughout the process that requirements are properly managed and stakeholder needs will be met.	0	2	0

			BAAN	IV&V ASSESSMENT		F		S
PROJECT	MAR	APR	MAY	CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
MANAGEMENT Project Organization and Management Scope and Requirements Management Cost, Schedule, and Resource Management Risk Management Communications Management Organizational Change Management Business Process Reengineering Training and Knowledge Transfer		R	R	Cost, Schedule, and Resource Management	Although the project schedule was re-baselined last month, Phase 1 Case Management go-live will be deferred again and there are also some delays in Phase 2 and 3 tasks. DLIR and DataHouse tentatively agreed to defer the Phase 1 Case Management go-live to June 30, 2022, pending ESC approval. However, there are already signs that this proposed date may still not be sufficient time to complete all planned go-live readiness tasks. Phase 1 Case Management go-live is already almost two years beyond the original date. It is unclear if Phase 2 and 3 timeline are achievable as many tasks were just compressed or if the schedule mitigation strategies will impact other factors critical to project success. Significant changes in schedule management practices (2019.07.PM13) are needed to prevent reoccurring delays. Insufficient project resources (2019.07.PM14) has been the root cause of many issues on the project to-date. Additional project resources are needed for Phase 1 Case Management activities. DLIR procurements of business analyst (BA) and paper scanning resources were approved which will help to add resources to select areas of the project team. However, DLIR must improve resource management strategies (2019.09.PM02) to increase utilization of all existing resources, accountability for task completion, and pace of project work. Three additional procurements are expected to be executed in June 2022, including the paper scanning contract that will significantly increase the total cost of the project. DataHouse is prepaid for Phase 1 and 2 but is still within the total contract cost and is adjusting Phase 3 invoices under the revised payment schedule. Improvements in cost management processes (2019.07.PM12) are needed to track and monitor other project costs.	0	4	0

	MAR	APR	MAY	IV&V ASSESSMENT	IV&V OBSERVATION	F	INDING	S
PROJECT	WAR	АГК		CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
MANAGEMENT Project Organization and Management Scope and Requirements Management Cost, Schedule, and Resource Management Risk Management Communications Management	V	V	R	Risk Management	Throughout the project, risk management processes have been ineffective in identifying and mitigating risks to the project. Risks are typically discussed when the impact is imminent. Despite early warning signs a few weeks out from Phase 1 Case Management go-live and even at the time of ESC approval of the revised timelines, risks were not proactively discussed or addressed. There are also signs of risk with regards to the new proposed Phase 1 Case Management go-live that should be analyzed and the mitigation plan should be included as a part of the presentation to ESC. Improvements in risk management processes (2019.07.PM09) are needed to proactively mitigate risks and minimize impacts to all phases of the project.	0	1	0
Organizational Change Management Business Process Reengineering Training and Knowledge Transfer			R	Communications Management	Although there are regular meetings between DLIR and DataHouse, there is still a lack of mutual understanding between the parties. Ineffective communication within the project team has regularly contributed to misunderstandings, insufficient preparation, and project delays. Open and transparent dialogue with verification of understanding is needed between all DLIR and DataHouse team members (2019.07.PM06) to successfully execute project and go-live tasks. Additional communications with internal and external stakeholders (2019.07.PM07) are necessary to prepare stakeholders for go-live. Phase 1 Case Management communication activities with carriers and adjusters have continually been deferred. For Phase 2 and 3, conversations with external stakeholders should begin earlier and regular updates and touchpoints should be established. One of the contracts to be executed in June 2022 is for a BA resource who will be responsible for working with external stakeholders.	0	2	0

	MAR	APR	MAY	IV&V ASSESSMENT	IV&V OBSERVATION	F	INDING	S
PROJECT	WAR	АГК		CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
MANAGEMENT Project Organization and Management Scope and Requirements Management Cost, Schedule, and Resource Management			<b>V</b>	Organizational Change Management (OCM)	Project touchpoints with internal users are increasing with the recurring weekly emails and trainings. DLIR also began to administer surveys to collect some OCM relevant data leading up to Phase 1 Case Management go-live. Additional planning is needed for post go-live OCM activities to measure user participation and system utilization and to establish a strong change support network. A structured OCM approach (2019.07.PM08) is critical for enabling change and mitigating resistance.	0	1	0
Management Risk Management Communications Management Organizational Change Management Business Process Reengineering Training and Knowledge Transfer			V	Business Process Reengineering (BPR)	DLIR continues to clarify business processes for Phase 1 Case Management go-live and the complimentary Content Management systems. However, internal and external stakeholders do not appear to have sufficient understanding of what the new business processes will be. It is critical that business processes are clarified (2020.12.PM01) to adequately prepare stakeholders for go-live. For Phase 2 and 3, discussions with stakeholders of business processes around the new system should begin earlier to provide a clearer picture of processes leading into UAT and more runway time prior to go-live. BPR opportunities should also continue to be discussed, prioritized, and analyzed (2021.08.PM01) for Phase 2 and 3.	0	2	0
	3		<b>V</b>	Training and Knowledge Transfer	DLIR commenced Phase 1 Case Management training activities and conducted surveys to collect feedback on training. The timing and format of training do not appear to adequately prepare users given the steep learning curve, unclear business processes, number of work-arounds, and limited hands-on practice. Updates to the training plan (2022.04.PM01) are needed to incorporate training feedback and to provide additional details of training session topics, objectives, and measures of effectiveness and user readiness.	0	1	0

#### TECHNOLOGY

System Software, Hardware, and Integrations

Design

Data Conversion

Quality Management and Testing

Configuration Management

Security

	4.55		IV&V ASSESSMENT			FINDING	S
MAR	MAR APR MAY	MAY	CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
		R	System Software, Hardware, and Integrations	The planning and execution of Phase 1 system transition activities continues to be a challenge. For the January 2022 Phase 1 Content Management go-live, transition activities were rushed and many tasks were deferred to post go- live in order to meet the timeline. In the following months, technical system issues required users to revert to the legacy system to perform their work. System issues are still being reported and addressed, but the plan to closeout remaining issues, the root causes of issues (2022.02.IT01), and the status of transition checklist tasks deferred to post go-live remain unclear. Similarly, the preparation of the Phase 1 Case Management transition checklist and many transition activities were left to be completed close to go-live due to time and resource constraints. Considering the increased complexity of Phase 1 Case Management, the number of outstanding project risks and issues may have a significant impact on DCD operations if not adequately addressed (2022.04.IT01). In order to minimize operational risk, DLIR and DataHouse must ensure that clear go/no-go criteria are established and satisfied and critical transition checklist tasks are completed prior to acceptance and go-live (2020.09.IT01). As Phase 2 development is already in progress and Phase 3 is to begin shortly, the planning of transition activities and go/no-go criteria should begin earlier to proactively identify and timely execute key transition tasks. System M&O roles, procedures, and metrics (2019.09.IT02) as well as interface solutions (2019.07.IT02) also remain unclear.	0	5	0

	MAR	APR	MAY	IV&V ASSESSMENT	IV&V OBSERVATION	ĺ	INDING	S
TECHNOLOGY	WAR	APR	IVIA T	CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
System Software, Hardware, and Integrations Design Data Conversion	•	•	Y	Design	Phase 3 design was scheduled to be completed by the end of May 2022 under the re-baselined schedule. Some design activities did begin but it is unclear what the new expected deliverable completion date is. Further clarification is needed of how BPR opportunities could be addressed through system design (2021.08.PM01) and integration with external systems (2019.07.IT02).	0	0	0
Quality Management and Testing Configuration Management Security				Data Conversion	DLIR completed Phase 1 Case Management data conversion validation testing in 2021 but limited testing metrics and inadequate test documentation made it difficult to determine the effectiveness or completeness of testing. As a result, new questions, concerns, and issues for data conversion and cleansing activities are still arising close to go- live. Additionally, as the conversion of paper files into electronic documents is important for the adoption and user experience of the Phase 1 Case Management system, the plans and processes for the paper conversion still need to be clarified (2019.11.IT01). The contract for paper scanning resources is expected to be executed in June 2022 but it is unclear how the timing of those resources will impact the success of upcoming system go-live and user adoption. DataHouse's Phase 2 data conversion cycles were scheduled to begin in May 2022 but were pushed back to June 2022. Discussion of Phase 2 data conversion and cleansing activities between DLIR and DataHouse as well as DLIR plans for performing data conversion validation testing should begin earlier to allow for sufficient time to identify potential data conversion issues and adequately plan and perform tasks.	0	1	1

		4.00	MAY	IV&V ASSESSMENT		FINDINGS		S
TECHNOLOGY	MAR	APR		CATEGORY	IV&V OBSERVATION	NEW	OPEN	CLOSED
System Software, Hardware, and Integrations Design Data Conversion Quality Management and Testing Configuration Management Security	R	R	R	Quality Management and Testing	DLIR UAT is a major hurdle for Phase 1 Case Management acceptance and go-live. Only 55% of the test cases are passed, performance of DLIR end-to-end and regression testing is still pending, and there are a number of unresolved issues and defects. DLIR continues to trend at ~13% test case completion per month. It is unclear how many of the in-progress test cases are pending due to reported issues and defects or due to limited testing resources bandwidth. With up to 45% test cases to be completed, even the new proposed go-live may not be is achievable or realistic. It is critical to perform adequate and systematic testing and resolve critical system issues prior to go-live to minimize the potential impact to operations. Testing activities for Phase 1 Content Management were rushed or deferred to post go-live in order to meet the timeline. This resulted in numerous quality and performance issues that resulted in reverting back to the legacy system (2022.02.IT01). DLIR and DataHouse must work together to prioritize and address UAT execution issues (2020.12.IT01). Additionally, test plans for Phase 1 Case Management UAT, end-to-end, and regression testing need to be updated for the new timeline and for additional details (2019.10.IT01). Phase 2 UAT was scheduled to begin in April 2022 to get an early start on testing. However, with the focus to complete Phase 1 UAT, the testing period was compressed with the start date pushed back to the end of May 2022. DataHouse continues to perform their Phase 1 and 2 system testing. DLIR and DataHouse still do not have formal quality management plans (2019.07.IT05). Quality metrics are critical for identifying root causes, analyzing trends, and informing go/no-go decisions.	0	3	0

		Р	APR	MAY	IV&V ASSESSMENT	IV&V OBSERVATION		FINDINGS		
TECHNOLOGY	MA	ĸ	APR		CATEGORY	IV&V ODSERVATION	NEW	OPEN	CLOSED	
System Software, Hardware, and Integrations Design			Y		Configuration Management	Separate configuration management plans were prepared for the DataHouse Content Management and Case Management development teams, however, a comprehensive configuration management plan (2019.07.IT06) including all DataHouse and DLIR processes, controls, and tools is still needed.	0	1	0	
Data Conversion Quality Management and Testing Configuration Management Security			Y		Security	DataHouse performed a vulnerability scan and remediation for the Content Management environments. A comprehensive security management plan (2019.07.IT07), formal security policies (2019.10.IT02), and an M&O plan (2019.09.IT02) are needed for both Phase 1 Content Management system operation and the upcoming Phase 1 Case Management go-live.	0	2	0	

### LESSONS LEARNED LOG

A log of key lessons learned is provided below to capture the knowledge and experience gained throughout the eCMS Project. These lessons learned can be utilized and applied to future phases of the eCMS Project or to new initiatives. The log includes the top ten lessons learned and opportunities for improvement with the greatest impact to the overall success of the project.

	ASSESSMENT CATEGORY	LESSONS LEARNED DESCRIPTION	SEVERITY
KEY LESSONS SET THE PROJECT UP FOR SUCCESS at the start with resources, culture, and knowledge	Cost, Schedule, and Resource Management	Assemble and train adequate State project resources: Inadequate DLIR project resources is the root cause of many project issues and delays. Project resource needs are regularly underestimated and inadequately planned for but are critical for creating a high-performing team and preventing reoccurring schedule delays. <i>Recommendations:</i> Carefully scope resource requirements early in the project including standard team member roles and required experience and skill sets. Prepare a resource plan including options for acquiring and backfilling project resources (e.g., procurement or special project exempt employees) to prevent conflict with operational duties and priorities. Provide training to all State project resources on project management and system development processes and terminology at the start of the project.	High
Establish strong FOUNDATIONAL project processes and CONTINUOUSLY improve SET metrics and criteria to regularly	Overall	<b>Create a collaborative project team culture with strong sponsorship:</b> The lack of team synergy between DLIR and DataHouse and inability to work as one team creates silos, limits mutual understanding, and reduces individual commitment and accountability. Collaborative project team environments result in the free exchange of knowledge, shared ownership and responsibility for outcomes, strong partnership between vendor and client, and transparent discussion of risks and issues. <i>Recommendations:</i> Set a collaborative and open team culture at the beginning of the project. Encourage new ideas and honest discussion. Project leadership and governance must continually reinforce culture and provide strong sponsorship.	High
MONITOR performance	Overall	<b>Leverage collective project knowledge and assets:</b> The inability to access valuable knowledge and assets from IT modernization projects across the State of Hawaii prevents the leveraging of past project efforts and immediately creating efficiencies. This is especially critical during the project initiation stage for drafting requests for proposals and contract terms that incorporate industry best practices, key deliverables, and clear terms; establishing governance structures; preparing project management plans; and proactively identifying common project risks. <i>Recommendations:</i> Compile and share trends in lessons learned across the State. Address common lessons learned as part of project initiation and approval. Share project documentation templates and examples from other projects.	High

ASSESSMENT CATEGORY	LESSONS LEARNED DESCRIPTION	SEVERITY
Scope and Requirements Management	<b>Implement strong requirements management processes and tools:</b> Poor requirements management practices lead to incomplete or inaccurate requirements documentation, lower user satisfaction, higher number of issues and defects, and additional time for rework. Additionally, cumbersome or manual requirements management tools reduce efficiency, traceability, and transparency. Effective requirements management processes and tools guide the project team from inception, development, testing, and ultimately to successful completion and final acceptance. <i>Recommendations:</i> Ensure processes for collecting, tracking, documenting, reviewing, and prioritizing requirements are performed throughout the project by the vendor and client. Invest in tools that automate traceability, provide analytical and reporting features, and support collaboration.	High
Quality Management and Testing	<b>Improve efficiency of State testing processes:</b> UAT delays impact overall project timelines or creates pressure to compromise quality standards to meet timelines. Insufficient or disengaged testing resources, quality issues with vendor testing and development, and limited vendor support in training also contribute to delays. Adequate and systematic testing ensure user and business needs are met and minimizes issues and defects that may impact operations. <i>Recommendations:</i> Develop test plans, draft test cases and scripts, and engage and train testing resources early. Begin test cycles following each development cycle. Invest in testing tools to automate regression tests. Closely monitor testing and quality metrics.	High
Project Organization and Management	<b>Maintain foundational project management processes:</b> Ineffective or inconsistent foundational project processes lead to greater confusion, inefficiency, disruption, and conflict. Project management and system development require discipline and rigor to successfully coordinate and execute. Individual project management and technology processes, including cost, schedule, resource, risk, communications, OCM, BPR, and training, all play a role in achieving project goals and outcomes. <i>Recommendations:</i> Incorporate and tailor industry best practices to the project. Vendor and client should discuss, agree upon, and document processes early in the project. Clarify and assign roles and responsibilities.	High
Project Organization and Management	<b>Practice continuous improvement:</b> Limited progress to address identified deficiencies hinders project performance and results in reoccurring issues. The eCMS Project has faced many challenges and issues to-date but most can be traced back to key deficiencies. Continuous improvement practices help to correct past problems and adjust to changes going forward. <i>Recommendations:</i> Schedule regular project assessments or retrospectives. Prioritize opportunities for improvement. Develop a plan and track tasks to address deficiencies.	High

ASSESSMENT CATEGORY	LESSONS LEARNED DESCRIPTION	SEVERITY
Overall	<b>Closely monitor success and performance metrics:</b> Insufficient collection and attention to metrics prevents objective analysis of progress and performance. Meaningful success metrics provide a clear picture of what success looks like and measure progress towards achieving goals. Effective performance metrics help to early detect project performance problems, analyze trends, identify root causes, and measure efficacy. <i>Recommendations:</i> Set success metrics prior to the start of the project. Incorporate metrics into project plans to ensure alignment. Regularly report on metrics to project leadership and governance to provide insight on status, identify risks and issues, inform decision making, and set performance expectations.	High
System Software, Hardware, and Integrations	<b>Set clear acceptance and go/no-go criteria:</b> Unclear acceptance and go/no-go criteria allow development and system go-live to keep move forward without ensuring stakeholder requirements are satisfied, quality standards are met, or critical transition readiness tasks are completed. Early discussions of and checkpoints for acceptance and go/no-go criteria prompt stakeholders to think about and articulate their expectations, garner stakeholder buy-in throughout the project, and objectively make critical decisions. <i>Recommendations:</i> Set acceptance criteria prior to the start of the related development cycle to provide greater understanding between stakeholders and the development and quality assurance teams. Discuss and agree upon go/no-go criteria for each development cycle and go/no-go criteria for go-live countdown checkpoints (e.g., 15, 30, 60, 90 days).	High
Overall	<b>Implement strong vendor management practices:</b> Ineffective vendor management practices result in prepayment of services, acceptance of deliverables that don't meet the DLIR's needs, swapped or junior resources, unfulfilled contract requirements, and discrepancies between the vendor proposal and the actual implementation. Strong vendor management practices help to keep both the vendor and the client accountable to meeting agreed upon requirements and contract terms. <i>Recommendations:</i> Incorporate quality requirements and standards, success and performance metrics, and acceptance criteria in the vendor contract. Clarify and document deliverable expectations early in the project (e.g., deliverable expectation document). Trace requirements. Review deliverables against quality standards, acceptance criteria, vendor proposal, and contract terms. Review vendor invoices against project status reports and contract terms.	High

### Appendix A: IV&V Criticality and Severity Ratings

#### **IV&V CRITICALITY AND SEVERITY RATINGS**

Criticality and severity ratings provide insight on where significant deficiencies are observed and immediate remediation or risk mitigation is required. Criticality ratings are assigned to the overall project as well as each IV&V Assessment Area and IV&V Assessment Category. Severity ratings are assigned to each risk or issue identified.

#### **Criticality Rating**

TERMS

**RISK** An event that has not happened yet.

ISSUE An event that is already occurring or has already happened. The criticality ratings are assessed based on consideration of the severity ratings of each related risk and issue within the respective IV&V Assessment Area and IV&V Assessment Category, the overall impact of the related findings to the success of the project, and the urgency of and length of time to implement remediation or risk mitigation strategies. Arrows indicate trends in the project assessment from the prior report and take into consideration areas of increasing risk and approaching timeline. Up arrows indicate adequate improvements or progress made. Down arrows indicate a decline, inadequate progress, or incomplete resolution of previously identified findings. No arrow indicates there was neither improving nor declining progress from the prior report.

RRRVVVVVOImage: Constraint of the second secon

A **RED**, high criticality rating is assigned when significant severe deficiencies were observed and immediate remediation or risk mitigation is required.

A **YELLOW**, medium criticality rating is assigned when deficiencies were observed that merit attention. Remediation or risk mitigation should be performed in a timely manner.

A **GREEN**, low criticality rating is assigned when the activity is on track and minimal deficiencies were observed. Some oversight may be needed to ensure the risk stays low and the activity remains on track.

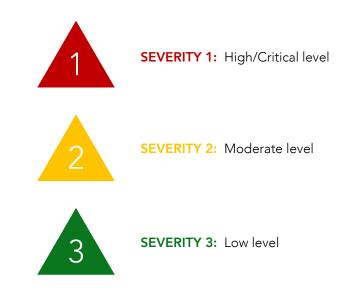

A GRAY rating is assigned when the category being assessed has incomplete information available for a conclusive observation and recommendation or is not applicable at the time of the IV&V review.

#### **Severity Rating**

Once risks are identified and characterized, Accuity will examine project conditions to determine the probability of the risk being identified and the impact to the project, if the risk is realized. We know that a risk is in the future, so we must provide the probability and impact to determine if the risk has a Risk Severity, such as Severity 1 (High), Severity 2 (Moderate), or Severity 3 (Low).

While a risk is an event that has not happened yet, an issue is something that is already occurring or has already happened. Accuity will examine project conditions and business impact to determine if the issue has an Issue Severity, such as Severity 1 (High/Critical Impact/System Down), Severity 2 (Moderate/Significant Impact), or Severity 3 (Low/Normal/Minor Impact/Informational).

Findings that are positive or preliminary concerns are not assigned a severity rating.

#### TERMS

POSITIVE

Celebrates high performance or project successes.

#### PRELIMINARY CONCERN Potential risk

requiring further analysis.

## Appendix D: Prior Findings Log

#### Appendix D: Prior Findings Log

Appendix D. I												
ASSESSMENT	FINDING ID	TYPE	ORIGINAL C		FINDING	ANALYSIS	RECOMMENDATION ID	RECOMMENDATION	SUPPLEMENTAL RECOMMENDATION	FINDING	FINDING STATUS UPDATE	CLOSED DATE CLOSURE REASON
Knowledge Transfer	2022.04.PM01	Risk		Moderate	training activities may limit the project's deployment timeline and user adoption	DataFouse completed their training materials deliverable and train-the- trainier sessions. DLIR is responsible for training other users, however, there is no formal training plan or approach. With Phase I Case Management op-live quickly approaching, the training program details need to be finalized and executed to allow users sufficient time to learn and familiaries themselves with the new systems. Some DCD users already received training through participation in UAT. The amount of training and supplemental sessions provided to testers for UAT demonstrates the steep learning curve and long runway time needed for users to learn how to use the new system. DLIR intends for these users to be the network that will help provide informal training and support to other users in their areas. However, some areas do not have a representative from their area (e.g., district officed) or the assigned representative did not actively participate in the UAT supplemental training sessions. Providing formal training will help to ensure that everyone receives consistent, baseline training. DLIR continues to update DataHouse provided training materials with additional information learned during UAT. However, these documents are more focused around and organized by system features rather than business processes.	2022.04.PM01.R2 2022.04.PM01.R3	Finalize a detailed training schedule. Develop standard operating procedures. Collect feedback on training.	curriculum, and materials. *Develop specific standard operating procedures for employees to understand how to perform their work using the current workflows in the new system. *Develop surveys to get user feedback to improve future trainings, to measure the effectiveness of training, and to determine the need for additional training activities.	Open	05/31/22: DLR commenced Phase 1 Case Management training activities and conducted surveys to collect feedback on training. Based on the survey results and observing the training sessions, the timing and format of training do not appear to adequately proper users. Additional training is needed given the steep learning curve, unclear business processes, number of work- arounds, and limited hands-on practice in the current training format. Updates to the training plan are needed to incorporate feedback and to provide additional details of training session topics and objectives. The surveys should also be improved to get better measures of training effectiveness and user readiness. A lesson learned from Phase 1 is that more training time is needed to prepare testers and end users to efficiently perform testing and their operational work. With Phase 2 UAT scheduled to begin shortly, DLR should also begin planing for Phase 2 training for betweers. DLR should consider separate testing and training sessions for Phase 2 as combining this with the overlapping Phase 1 activities may cause confusion between Phase 1 and 2 functionality.	
System Software, - Hardware, and Integrations	2022.04.1701	Risk	Moderate >	High	The number of outstanding project risks and issues may simpart DIR operations if not addressed prior to go-live.	<ul> <li>The GMS Phase 1 Case Management system golive is just over a month sway on June 9, 2022. There is inherent risk involved in the launch of an new system. This risk is typically mitigated through carful planning, through quality, testing, and acceptance checks, and post golive support teams and processes. DLIR and DataHouse continue to make regonsibilities, and metrics. Whit has omay details left to figure out or resolve during production, this may have a significant impact on the continuity and efficiency of DLIR operations. The Phase 1 Content Management system was two months into production before the critical blockers were addressed. During this time, documents had to be canned into both the legacy and the new system to avoid any major impact on the operations of the limited stakeholder group. There is significantly increased complexity in the Case Management system compared to Content Management and a far greater number of internal and external stakeholders. This raises the inherent risk associated with this next poli-logi collectively may impact the owerall success of the Phase 1 Case Management system launch and potentially the DLIR 0019 07.1105). origoing UAT execution issues continue to limit progress to complete to Edg. 20.216.1701, 2019.10.101, and 2019.07.1050, origoing UAT execution issues continue to limit progress to complete testing are also still pending quality metals. DLIR sections. The following roject risks and issues (refer to Appendix D. 919.07.1050). origoing UAT execution issues continue to limit progress to complete testing are also still pending quality metals. DLIR sections, DLIR performance of end-to-end testing and plans for regression testing are also still pending quality metals. JLIR must ensure that adequate testing is performed to minimize issues and defects post . • Unclear Business Process (2020.12.1701) Criteria for the Phase 1 Case Management po-live and acceptance still new to post gol-live to ensure that the project does not move forward winhout completing</li></ul>	y 2022.04.IT01.R2 2022.04.IT01.R3 2022.04.IT01.R3	assessment. Increase post go-live support and resources.	<ul> <li>Identify areas of operations at greatert ink and assess impact (e.g., operational workdasd, compliance, constituents/claimants) of potential technical issues or system down-time.</li> <li>Consider busines processes with high volumes, statutory requirements, or greater external stakeholder involvement.</li> <li>Assign dedicated DLR and DataHouse resources for on-site support and troublebooting.</li> <li>Create a support plan specific for external stakeholders.</li> <li>Clorify issue/inclent escalation processes and tools.</li> <li>Consider busined Q&amp;A and issue resolution.</li> <li>Document functionality, remaining defects, and any open deliverables to be completed post go-live.</li> <li>Provide defailed dates and resources to address each post go-live delivery.</li> </ul>	Open	05/31/22: Accuity increased the severity rating from Level 2 (Moderate) to Level 1 (High) as not enough progress was made to address the many risks and issues that collectively could have a significant impact on operations. Many transition activities were left to be completed close tog op-love due to time and resource constraints. Even with the plan to defer the go-live again, there are already signs that the new proposed date may still not be sufficient time to complete all critical tasks necessary to mitigate the operational risk. DUR and DataHouse did discuss the post go-leve support and DataHouse plans to have some on-site resources. Additional discussions of support processes and DUR support resources are needed for both internal and external stakeholders.

Goumance Effectiveness	2021.05.PG01 Issue	Moderate	Moderate	Insufficient support and guidance from project governance may limit the project shallow to vercome current project shallenges.	Since December 2020, DUR and DataHouse have been working to address and analyze various Content Management tasus (refer to finding 221:03.1701). March 2021, DataHouse presented three options to the ESC for the Content Management solution. Previous plans and timelines to make a decision regarding the Content Management solution were postponed to allow more time for additional analysis. DUR and DataHouse recently agreed on a new plan and timelines of tasks to reach a decision regarding the Content Management solution by July 2021. As the Content Management inplementation delays are stalling the Phase 1 Case Management and Phase 2 activities and significantly impacting project success, it is critical for project governance to ensure that the project success, it is critical for project governance to ensure that the project success, it is critical for privile to were access the and other high-impact issues ferlor to Appendix D. Privor Findings Log1. Additional guidance and more active involvement from the ESC and project sponsors are needed to help remove barriers and drive progress.	2021.05.PG01.R1	Increase project governance involvement.	<ul> <li>Discussi high-impact barriers/blockers and mitigation plans for critical issues with ESC.</li> <li>Evaluate how various ESC members can be leveraged to remove barriers and execute mitigation plans.</li> <li>Consider adding additional ESC meetings until critical issues are resolved.</li> <li>Consider additional ESC meetings until critical issues are distributed in the second second</li></ul>		Refer to prior N&V Monthly Report for status updates before January 2022. 01/25/22: The DataHouse Project Sponsor significantly increased involvement and committed additional resources which helped the project tam to make grater progress towards the Phase I Content Management goline. Program governance is especially critical for guiding the project to the Phase I Case Management golive that is currently being deployed. It is important for preject governance to help guide the project forward in order to avoid recurring schedule delays. 03/23/22: The eCMS Project Executive Steering Committee (ESC) was not able to meet the month to discuss project updates, risks, and issues. The DataHouse wellness plan is expected to be provided in April 2022. 04/26/22: The ECS reconvened this month and approved the re-baselined project schedule. The DataHouse wellness plan was delivered as a project statu update during the ESC meeting. The ESC needs to play a greater role to drive progress and enforce accountability to prevent the continual cycle of dalays. 05/31/22: Accuity changed this finding from a risk to an issue. The ESC approved the net imelines last the store all convents the continual cycle of dalays. A lesson learned from the eCMS Project is that governance needs to play a greater role to help the project be successful. Repeated requests for changes to project timelines have and it is unclear which perpetuates the changes to project times in a are expected to be adjuited again in June 2022. A lesson learned from the eCMS Project is that governance needs to play a greater-role to help the project be successful. Repeated requests for changes to project times in a are expected to be adjuited again in June 2022. A lesson learned from the eCMS Project is that governance needs to years after the original target date. These I Case Management the inter is almost two years beyond the original oryle date and it is unclear wheth is ower tow years after the original target date. These I Case Management		
Business Process Reengineering	2020.12.PM01 Issue	Moderate	Moderate	Unclear business processes supporting the new system may impact testing and go-live readiness.	Ingoing Phase I Content Management UAT is raising questions regarding how the system will be used after interior. Content Management go-live as well as the integrated Case Management go-live. The most critical business process in question is the use of the new quice targonne (IAR) coded works? compensation forms and the related business process for data entry and scanning of these forms during the interim phase. Other examples of business processes that need to be clarified include initial paper conversion scanning, subsequent separation and indexing of files, transferring of cases to LIRAB during the interim, preparing and viewing select documents for hearings, storing/indexing files associated to multiple cases, and acceptable use of annotations in electronic documents. Clarification of business processes is critical to ensure that proper UAT test cases are designed anound how the system will be used in the future. Clear understanding of business processes is also important to provide timely communications and necessary training to impacted stakeholders prior to go-live.	2020.12.PM01.R1	Clarify redesigned business processes.	Identify business processes that need to change with the modernized system. -Discuss and evaluate options for redesigning identified business processes considering impacts on stakeholders. -Ensure that communication and training plans are updated for major changes in business process improvement performance goals and success metrics. -Consider creating business process flows for the interim Content Management phase. -Consider creating informational flyens/cheat sheets to help internal and external stakeholders understand and prepare for business process changes.		Inter to prior IV&V Monthly Report for status updates before January 2022. 01/25/22: Business processes continue to be discussed and refined for the limited DLIR stakeholder group in the first rollout of Phase 1 Content Management. Content Management business processes for other stakeholder groups as well as the significantly more complex Phase 1 Case Management updates to report. 03/23/22: Changes to business processes around the new Case Management system need to be clarified in preparation for the upcoming go live. 04/26/22: DLIR continues to clarify business processes during UAT. With Phase 1 Case Management go-live quickly approaching, it is critical that business processes are clarified for both the Case Management and the complementary Content Management systems so that DCD employees know how to perform their work post go-live. 05/31/22: Accuity changed this finding from a risk to an issue as unclear business processes are clarified for both the Case Management and the complementary Content Management systems so that DCD employees know how to perform their work post go-live. 06/26/12: Clark during the execution and efficiency of UAT. DLIR held recurring sessions in early 2021 to discuss Phase 1 business processes and they were discontinued due to time and resource constraints. As a result, questions about business processes are aring during stakeholders. A lesson learned from Phase 1 is that discussions about business processes are also being raised during training as well as by external stakeholders. A lesson learned from Phase 1 is that discussions about business processes are should begin earlier to provide a clearer picture of processes leading into UAT and more nurway time pictor to go-live. With Phase 2 UAT adhotled to begin shortly, DLIR should resume recuring gessions to discus business processes so that these discussions do not impact the efficiency of executing UAT.

					Incomplete Quality Management Plan and Go/No-Go Decision Criteria					test case completion per month. With up to 60% test cases to complete in		
					(2019.07.IT05, 2020.09.IT01) – DataHouse and DLIR still need to finalize their quality management plan and define quality metrics and					less than 3 weeks, this is an aggressive target. DLIR also needs to complete their end-to-end testing during this time. DLIR and DataHouse must work		
					acceptance criteria.					together to prioritize and address UAT execution issues.		
					acceptance citteria.					togener to promize and address OAT execution issues.		
					In addition to the specific recommendations made as a part of this					05/31/22: DLIR UAT is a major hurdle for Phase 1 Case Management		
					finding, the IV&V recommendations made at the findings referenced					acceptance and go-live. Only 55% of the test cases are passed,		
					above will also help to address this issue.					performance of DLIR end-to-end and regression testing is still pending, and		
	1	1								there are a number of unresolved issues and defects. DLIR continues to		
	1	1								trend at ~13% test case completion per month. It is unclear how many of		
	1	1								the in-progress test cases are pending due to reported issues and defects or due to limited testing recourses bandwidth. With up to 45% test cases to be		
	1	1								due to limited testing resources bandwidth. With up to 45% test cases to be completed, even the new proposed go-live may not be achievable or		
1	1	1								realistic. Accuity reopened the 2020.12.IT01.R2 recommendation as		
	1	1		1						additional improvement and discussion is needed around the issue/defect		
										resolution process. The regular meetings between DLIR and DataHouse to		
										discuss issue/defect resolution discontinued in the current month but will be		
										resumed in June 2022.		
	1	1										
	1	1								Lessons learned from Phase 1 are that DLIR testing processes need to be		
	1	1								more efficient and UAT execution issues need to be addressed early and aggressively to prevent delays. Phase 2 UAT was scheduled to begin in April		
	1	1								2022 to get an early start on testing, closely following each development		
1	1	1								cycle. However, with the focus to complete Phase 1 UAT, the testing start		
	1	1		1						date was pushed back to the end of May 2022. In order to keep the same		
	1	1								go-live date, the scheduled time for UAT was compressed down to three		
	1	1								months. There are significantly more test cases for Phase 2 with ~1,300 test		
	1	1								cases compared to ~500 for Phase 1 Case Management. This would require		
	1	1		1						~400 test cases to be completed each month to achieve the current		
1	1	1								schedule. As test case completion for Phase 1 Case Management UAT is		
	1	1								averaging ~70 test cases per month, the current UAT schedule for Phase 2		
		1								already does not appear to be realistic. DLIR and DataHouse should already begin actively discussing Phase 2 UAT execution issues and exploring		
						1	1	1		Degin acuvely discussing Phase 2 UAT execution issues and exploring		1
										mitigation strategies including ways to improve UAT efficiency.

fardware, and fardware, and ttegrations	2020.09.1701 Iss	ue High	Hi	igh	Unclear go/no-go criteria may impact the orderly completion of all tasks required for system go-live.	The criteria for the go/no-go decision are not completely and clearly defined and agreed upon. The decision to go-live involves many areas and tasks of the project including testing, quality management, security, data conversion, training, communications, and deliverable review, as well as the operational readiness of users. Various project plans often include or establish select criteria; however, some of these related plans pending completion of finalization include the test plans (2020.02.1101 and 2019.10.1101), the quality management plan (2019.07.105), and security management plan (2019.07.1107). Additionally, acceptance criteria for requirements (2019.10.1107). Molitonally, acceptance criteria for requirements (2019.10.1107). Additionally, acceptance criteria for cequirements (2019.10.1107). Additionally, acceptance criteria for cequirements (2019.10.1107). Additionally, acceptance criteria for cequirements (2019.10.1107). Additional and cequire criteria centration stabilish clear criteria for the go/no-go decision. DUR is planning to draft a go/no-go checkiut to summize all of the criteria and tasks. DataHouse plans to provide a cutover plan to provide additional information about pre and post go-live tasks.	2020.09.101.R1	Establish complete and clear goring go criteria.	<ul> <li>Data bill oncogo criteria in advance of the go-live decision to allow for sufficient time for tasks to be completed and criteria satisfied.</li> <li>Ensure all parties agree upon go/no-go criteria including impacted stakeholders.</li> <li>Consider go/no-go criteria such as all requirements meet acceptance criteria and are approved by DLR, end user training is completed, and critical bugs and issues are identified and resolved.</li> <li>Consider setting go-live countdown checkpoints (e.g., 15, 30, 60, 90 days) for specific go/no-go criteria or tasks to be reviewed or completee by.</li> </ul>		Refer to prior W&V Monthly Report for status updates before January 2022. 01/25/22: DLR and DataHouse established a consolidated go/no-go checklist for the first rollout of Phase 1 Content Management. Checklist tims were proirtized between pre and post go/lex completion. DLR and DataHouse agreed that post go-lev items will be completed by the end of February 2022. Go/no-go checkliss are still needed for the DCD rollout of Phase 1 Content Management planned for February 2022 and Phase 1 Case Management in March 2022. It is critical for the go/no-go checklist and deployment activities to be finalized espacially for Phase 1 Case Management lue to the significantly increased complexity of the system and higher number of internal and external stakeholders that will require greater coordination and longer lead times. 02/24/22: The Phase 1 Case Management March 31, 2022 go-live is defermed but the revised schedule is pending. It is critical for the go/no-go checklist and deployment activities to be finalized. 03/23/22: Nu updates to report. 04/26/22: With Phase 1 Case Management go-live six weeks away, the go/no-go criteria and transition checklist but some of the completed. 05/31/22: DLIR and DataHouse began to prepare the Phase 1 Case Management transition checklist but some of the completed. A lesson learned from Phase 1 Content Management go-live is that transition activities were rushed and many tasks were deferred to post go-live in order	
Project Organization and Management	2020.07.PM01 Issu	ue High	Hi	igh	Limitad progress to address previously identified deficiencies for foundational project processes may result in reoccurring issues and delays.	N&V identified a number of ricks and issues since the M&V Initial Report in July 2019 related to foundational project processes. Some of the more critical areas requiring improvements include cost management, schedule management, resource management, requirements management, change management, risk management, and testing as these processes impact mana spacets of the project execution and contribute greatly to overall project performance and project success. Identified deficiencies contributes to project delays experienced in Phase 1. For example, a significant amount of time was spent clarifying and refining Case Management user stories due to incomplete and unclear requirements documentation. Additionally, the project was delayed several times for AWS due to unclear requirements, tasks, and resources needed as well as ineffective processes to document and analyze the change and identify and mitigate risks associated to the AWS build. Incremental progress was made for many findings but a majority are still open. Progress was limited by availability of project resources and	2020.07.PM01.R2	Perform a project assessment. Formulate a plan for addressing identified deficiencies.	Consider performing retrospective for project processes. •Consider conducting performance assessments for the project team, individual team members, and governance. •Document leasons learned and necessary actions or follow-up to prevent reoccurrence of similar issues. •Prioritize based on relevance to upcoming activities; consider focusing on requirements management and BPR processes to optimize effectiveness and efficiencies of upcoming requirements gathering sessions. •Develop high-level timeline and tasks for addressing deficiencies and begin tracking progress.		to meet the timeline which resulted in users having to revert to the legacy system to perform their work. Gon-og or citreia and transition checklists should be used objectively to make critical go-live decisions. Refer to prior N&V Monthly Report for status updates before January 2022. 01/25/22: DataHouse assigned a resource to help with closing out prior IV&V findings. DLIR plans to perform a retrospective after the Phase 1 Content Management go-live to review lessons learned and make changes for future phases. Immediate adjustments of foundational project management processes must be made to prevent reoccurring delays and improve project performance, especially for Phase 1 Costent Management us conducted. Developing and executing a plan to address the deficiencies identified during the lessons learned drine unsil out der phases. The wellness plan is still pending. 03/23/22: The DataHouse wellness plan to address project risks and issues is espected to be provided in April 2022. Addressing these previously identified deficiencies and lessons learned from the Phase 1 Content	
						competing organizational and project priorities. With the kick-off of Phase 2 in August, this is a great opportunity to review identified deficiencies, evaluate the effectiveness of current project processes, reflect on lessons learned on the project to-date, and make necessary improvements for upcoming activities. Additionally, addressing deficiencies will better position the project to handle and adjust to changes going forward including potential rapidly evolving circumstances related to the COVID-19 pandemic (refer to finding 2020.03.PM01).					Management go-live are critical to properly prepare for the upcoming and more complex Phase 1 Case Management go-live. 04/26/22: The DataHouse wellness plan was delivered as a project status update during the monthly ESC meeting; however, the presentation was high-level and did not address specific open risks and issues. Previously identified deficiencies and lessons learned from the Phase 1 Content Management go-live still need to be addressed. 05/31/22: Accuity changed this finding from a risk to an issue a failure to address deficiencies has resulted in reoccurring issues. Similar risks and issues from Phase 1 are repeating for Phase 2. DLIR and DataHouse should be addressed efficiencies has resulted in encourting the same mistakes. A lesson learned from the eCMS Project is that identified deficiencies should be addressed more timely and earlier in the project to prevent reoccurring issues.

Data Conversion 2019.11.IT01	Issue Moder	ate Moderate	Unclear data conversion plans and processes may reduce DLR's ability to prepare for proper data conversion.	The Content Management Conversion and Migration (version 1.2 pending DLR approval) and Case Management Conversion and Migration (version 1.1 pending DLR approval) describe the data conversion process and roles and responsibilities between DataHouse and DLR. DLR is responsible for performing UAT on the data and ultimately signing of on the final reconciliation reports but has not yet formalized plans for these tasks. The data conversion plans do not provide sufficient details and DLR does not have insight to the DataHouse data conversion team's activities, tools, reports, risks and issues, and testing. As such, DLR is unable to properly prepare for their part in the process and will not be able to adjust their data conversion	2019.11.IT01.R1 2019.11.IT01.R2	data conversion process.	<ul> <li>Explain how data conversion tools perform validation and reconciliation steps and share available reports and logs.</li> <li>Explain the process for how the data conversion plans will be updated for changes in system requirements.</li> <li>Provide details on timing, number of data extractions and tests to be performed, and necessary remapping data.</li> <li>Focus DLR tests to address identified data conversion risks and issues.</li> <li>Estimate data conversion test resource needs and ensure adequate resources are identified, trained, and scheduled (refer to findings 2019.09.PM02 and 2019.07.PM14).</li> </ul>		Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22: Procurement of DLR data conversion resources is in progress to perform conversion of paper files. The procurement covers open cases and closed cases for the last 30 years. The estimated contract start date is early March 2022 and the target completion date is February 2023. It is unclear how the timing of this work will impact the use of the new system or business processes for the Phase 1 Content Management DCD rollout and the Phase 1 Case Management golive. 02/24/22, 03/23/22, and 04/26/22: No updates to report.	
				test plans for maximum efficiency. Additionally, DLIR has not finalized plans for scanning current paper files to ensure necessary data quality to support system use at go-live. The IV&V recommendations made at 2019.07.PM02.R3 and 2019.07.PM13 Zergarding DataHouse including DLIR in project activities and adding detailed tasks to the project schedule will also address this finding. Below are additional recommendations to further improve data conversion plans and activities.	2019.11.IT01.R3	Formalize DLIR Case Management data conversion scanning plans.	<ul> <li>Evaluate the impact on operations and project success of different data conversion scanning approach options.</li> <li>Estimate scanning time requirements and begin to schedule or acquire necessary resources (refer to findings 2019.09.PM02 and 2019.07.PM14).</li> </ul>	2	05/31/22: Accuity reopened the 2019.11.IT01.R1 and 2019.11.IT01.R2 recommendations as new questions, concerns, and issues about Phase 1 Case Management data conversion are still arising close to go-live. It is also unclear what DLIR's plans are for performing the final migration validation testing. Additionally, as the conversion of paper files into electronic documents is important for the adoption and user experience of the Phase 1 Case Management system, the plans and processes for the paper conversion still need to be clarified. The contract for paper scanning resources is respected to be securide in June 2022. It is unclear how the timing of those resources and scanning activities will be coordinated with other transition activities and how it may impact the success of upcoming system go-live and user adoption. A lesson learned from Phase 1 is that discussions and planning of data conversion activities and testing should begin early. Due to insufficient planning, the Phase 1 Case Management data conversion availduation testing was unorganized, limited testing metrics were collected, and tests performed and the results were not properly documented. This made it difficult to determine the effectiveness or completeness of testing. DLR and that dougle begin discussing Phase 2 data conversion avail/times and tartafous effectives and testing should begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafous ehold begin discussing Phase 2 data conversion avail/times and tartafo	
Scope and Requirements	1 Risk High	Moderate		Added complexity to requirements traceability is due to the current requirements management process. Requirements documentation was	2019.10.PM01.R1	Improve requirements traceability.	<ul> <li>Trace contract requirements to requirements subsets used by the development teams to ensure completeness.</li> </ul>	Open	how the data conversion data can be leveraged for UAT so that the need to manually create text data does not impact the efficiency of executing UAT. DUR should also begin planning data conversion testing including drafting text cases, creating templates to document testing, scheduling testers, and preparing training materials. Refer to prior IV&V Monthly Report for status updates before January 2022.	
Management			impact the ability to ensure the overall eCMS solution fulfills all requirements	requirements malagement ploces. Requirements documentation was developed sparate from the DataHouse contract requirements and more detailed requirements were developed by the Content Management and Case Management development teams to use for development. As a result, there is duplication of requirements in the RTM which will likely impede traceability to requirements throughout the life of the project. DataHouse made incremental improvements to the RTM. The requirements documentation were traced to the use cases used by the Content Management development team or user stories used by the Content Management development team or user stories used by the Content Management development team or type teen traced to the requirements used for development. Requirements are not currently traced to project objectives and success metrics to ensure			development teams to ensure compresenses. - Consider identifying high-level requirements that duplicate more detailed requirements to reduce redundancy in traceability to design and testing. • Trace requirements to the project objectives success metrics (refer to finding 2019.07.PGGS) to ensure each approved requirement adds business value. • Add acceptance criteria to the RTM to ensure stakeholder satisfaction. • Consider use of a requirements management tool with greater functionality.		01/25/22 and 02/24/22: No updates to report. 03/23/22: Accuity decreased the sevenity rating from Level 1 (High) to Level 2 (Moderate) as DLR improved processes to trace requirements to testing and acceptance. N&V traced a sample of requirements to their respective test cases to ensure completeness of DLR's approach which resulted in one exception due to a misclassification of the requirements and related test cases to ensure that they are properly assigned to the correct phase for testing. 04/26/22: No updates to report.	
				Cultering valued to project objectives and souccess interface to ensure requirements add business value or to acceptance criteria to ensure stakeholder satisfaction. Additionally, the RTM is maintained in Microsoft Excel which limits version-control, efficient collaboration and review, and integration with testing.					DVC2022. No diputatis to the point. D5/31/22: DLR's approach to address requirements traceability was to develop test cases that would provide traceability of requirements from the DataHouse contract, meetings with stakeholders, and other DataHouse deliverabiles. However, this approach identified missing requirements or issues too late in the process and it is unclear what will be addressed as part of the Phase 1 Case Management go-live. Lessons learned from the eCMS Project are that requirements traceability should be done from the start and the use of Excel to manage requirements. DLR should ensure that contract requirements are traced to requirements documentation. DLR should also explore tools that can automate traceability.

Guality Management and Testing	2019-10./T01 Issu	ie Hig	gh	High	Lack of approved test plans may impact the execution and quality of test activities and documentation.	According to the Project Management Plan (version 1.3), the DataHouse test plan vas scheduled for completion on September 3, 2019. Due to the need to focus resources on the AWS setup and network connections, DataHouse is now trageting to complete the test plan in November 2019. DLR planned to complete the DLR test plan in October 2019. Due to resource constraints and the need to work on other DLR IT initiatives, the DLR test plan expected completion date was revised to November 2019 and the plan may be combined with the DataHouse test plan. As DataHouse test activities are scheduled to begin in November 2019, DLR also needs to establish their own test strategy and test needs. DLR also needs to establish their own test strategy as well as identify, train, and schedule DLR test resources.		Finalize the test plan.	Identify applicable test standards and requirements. Delineater (or inding 2019 07.PM02). Estimate test and responsibilities between DataHouse and DLIR (refer to finding 2019 07.PM02) and 2019.07.PM14).		Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22: There are pending issues from Phase 1 Content Management UAT that are to be addressed pout gol-lwe. DLR will continue to perform regression testing with a targeted completion at the end of February 2022. DLR also plans to conduct performance testing for Content Management post gol-lwe. As for Phase 1 Case Management UAT, performance metrics abour only 1% of test cases have been completed to clate and completion in February 2022 does not appear likely. The test plan for Case Management UAT needs to be reassessed and adjusted immediately. 22/24/22: DLR significantly increased testing resources and is making progress to start planning and tracking test cases by week. However, the plan for test completion percentage targets may need to be revised as current performance metrics for Phase 1 are below planned metrics. 03/23/22: DLR significantly increased testing resources and is making progress to start planning and tracking test cases by week. However, the plan for test completion percentage targets may need to be revised as current performance metrics for Phase 1 are below planned metrics. 03/23/22: DLR implemented recurring sessions to provide additional training and support for UAT testers. DLR plans to revise the testing target imetrics for Phase 1 Case Management to align to the new ind-May timeline. DLR test plans for Phase 1 Testgression testing as well as Phase 2 UAT need to be detailed out. These 2 UAT was scheduled to begin in April 2022 but with the focus to complete Phase 1 testing. It is unclear when these activities will begin. 05/31/22: Only 55% of the test cases are passed and performance of DLR end-to-ad and regression testing is still pending. Test plans for Phase 1 Case Management UAT, end-co-ad, and regression testing needs to begin earlier to support an efficient execution of testing. With the focus to completed post hould update the test plan for what can realistically be achieved b		
Security	2019.10.1702 Risk	ς Hiς	gh	High		DLIR currently does not have formal security policies to determine security requirements for the CANS Project and does not have security procedures in place to adequately protect eCMS Project data. The lack of policies primarily impacts the completion of the AVS setup and the Content Management solution component. Security requirements for bedoud environment must be determined and controls implemented before the AWS environments can be used for planned data conversion and testing activities. The determination of security requirements is critical as data conversion activities are already delayed for the AWS setup and testing activities are to begin in November 2019. The development of formalized policies will also impact the application security mangement plan and design that DataHouse is responsible for (refer to finding 2019.07.1707). Security policies and the resulting security requirements should be determined immediately to prevent further delay of the project.		Formalize security policies.	Work with ETS to align DLR policies with State policies and/or a standard security famework.     *Consider prioritizing security policies that are most relevant for use of fould services and data protection (e.g., security logging and monitoring, MFA, remote access, encryption of data-at-rest and data-in- transit)     *Clarify roles and responsibilities for security controls between DLIR and ETS.     *Consider prioritizing security procedures.     *Consider prioritizing security procedures that are necessary for the operation of the AWS environments.	Open	Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22: DUR clarified some of the security requirements for Phase 1 Content Management with ETS. 02/24/22, 03/23/22, 04/26/22, and 05/31/22: No updates to report. A lesson learned from the eCMS Project is that State security policies and requirements should be in place prior to the start of the project.

Resource management strategies should be revisited to improve management and productivity of DLR resources, especially for Phase 1 Case Management UAT, including how to best leverage the additional DataHouse resources committed to the project. 20/24/22: DLR onboarded additional resources for UAT. Test cases are assigned to testere effectively and testing progress is monitored more closely. 20/24/22: Resource engagement and ownership improved. DLR implemented recuring sessions to provide additional training and support for UAT testers. This is also helping to keep testers on task and make progress to complete assigned test cases. However, DLR should continue exploring other resource management strategies to increase pace of work as UAT is still behind schedule. 04/26/22: No updates to report. 05/31/22: Accuity changed this finding from a risk to an issue as the ineffective management of project resources is resulting in resocuring project delays. DLIR did start to schedule breakout sessions with smaller groups of lesters to help resources complete assigned test cases. However, despite these efforts, the average test case completion rate for the month did not increase. Additional resources accountability for task completion, and pace of project resources accountability for task completion, and pace of project to work. A lesson learned from the eCMS Project is that State resource planning needs to occur prior to the start of the project to set the project up for success. Resource requirements haloub de acrefully stoped to ensure there are adequate resources to perform critical project work. Resource planning should include backfilling project tessures to prevent conflict with operational duties and priorities.

Organization and Management					acceptance process has contributed to project delays and resulted in the acceptance of deliverables that do not meet industry standards.	As DLR has had limited involvement in project activities or the preparation of deliverables (effert to finding 2010-07.PMQ2), DLR does not have an understanding of the purpose of the deliverables or the thought process and factors that were considered in developing the deliverables. This has led to protracted review periods and acceptance of deliverables that do not meet industry standards (refer to finding the standard of the standard standard standard standard standard acceptance of deliverables that do not meet industry standards (refer to finding the standard s	2019.07.PM03.R2	criteria. Hold joint DLIR and DataHouse deliverable review meetings to walk through deliverables.	(refer to finding 2019.07.IT05), in a contract amendment (refer to finding 2019.07.PG03), or in Deliverable Expectation Documents (DED).		01/25/22: DLR signed off on the Phase 1 Content Management system installation and configuration deliverable but it is unclear what the acceptance criteria was and whether the deliverable adequately docum the information DLR needs in order to perform M&O for the system (rel also to finding 2019.09.1102). DLR also signed off on Content Manager	
						2019.07.PM10). A lack of a clear deliverable listing or acceptance criteria (refer to finding 2019.07.PG03), a lack of a quality management process and resource to evrif deliverables (refer to finding 2019.07.IT05), and over tasked project managers (refer to finding 2019.07.PM14) also contribute to an ineffective deliverable review and acceptance process. The delay in the approval of deliverables has been cited by the eCMS	2019.07.PM03.R3	Implement formal deliverable review and approval processes.	<ul> <li>Include both the scope validation process for acceptance and the quality control process for correctness (refer to finding 2019.07.IT.05).</li> <li>Include an evaluation of deliverables against acceptance criteria and requirements documentation.</li> <li>DUR should understand how each deliverable impacts the project schedule, roles and responsibilities, and ultimately the quality of the</li> </ul>		also to infaming to information to the set of the set o	
						Project team as one of the reasons the Phase 1 go-live dates were extended. Based on informal NWV recommendations, DataHouse and DLIR started to implement joint deliverable review meetings beginning June 2019.			technical solution and success of the project.		04/26/22 and 05/31/22: No updates to report. A lesson learned from the eCMS Project is that DLIR continued to accept and approve deliverables that they were not satisfied with. DLIR should incorporate deliverable acceptance criteria into the vendor contract or clarify	
-											and document deliverable expectations early in the project. Additionally, DLIR should review deliverables against quality standards, acceptance criteria, vendor proposal, and contract terms.	
Communication Management	2019.07.PM06	issue M	loderate	High	DataHouse's ineffective and untimely communications with the DLIR Project Team contributed to DLIR's incomplete understanding of the technical solution, potential risks, and upcoming project activities.	Communication activities listed in the Project Management Plan (persion 10) did not occurs a planned as the weekly project status meetings did not begin until April 2019 and the first progress report was not completed until Perburay 2019. Despite the commencement of regular project communications, misunderstandings and miscommunications between the Deathouse and DLIR project teams continued to occur. DLIR project team members had a piecemeal understanding of the technical solution (refer to finding 2019.07.1102) and project risks and	2017:07.PM06.RT	Implement daily touch point meetings between DataHouse and DLIR Project Managers.		Open	Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22: Recurring meetings and DataHouse on-site resources allowed for frequent communications between DLR and DataHouse that were critical for keeping the project on track with the scheduled Phase 1 Content Management pol-live. Regular communications and recurring meetings between DLR and DataHouse are especially needed for Phase 1 Case Management that is currently a triak.	
						issues (refer to finding 2019.07.PM09). Additionally, information regarding upcoming project activities was not provided timely. For example, Databuose did not timely communicate to DIR what to expect for the design stage sessions (e.g., what would be covered each day, which end users needed to participate). There has also been a lack of communications regarding the upcoming build stage activities (refer to					02/24/22 : DLR and DataHouse frequently meet to discuss Case Management UAT. Continued open and transparent dialogue between all DUR and DataHouse team members is critical for smooth and timely project execution.	
						finding 2019.07.PM05). The IV&V recommendations made at 2019.07.PM02.R2 and 2019.07.PM02.R3 regarding DataHouse working on-site and including DUR in project activities will also address this finding. Below are additional recommendations to further improve project team				03/23/22 and 04/26/22: With greater clarity needed around status, plans, schedule, processes, and metrics particularly for the upcoming Phase T Case Management go-live, it is critical that DLIR and DataHouse communicate frequently, openly, and transparently for smooth and timely project execution. 05/31/22: Accuity increased the severity rating from Level 2 (Moderate) to		
						communications.					05/31/322: Acculty increased the sevently rating trom Level 2 (Moderate) to Level 1 (High). Although there are regular meetings between DIR and DataHouse, there is still a lack of mutual understanding between the parties. Ineffective communication within the project team has regularly contributed to misunderstandings, insufficient preparation, and project delays. Open and transparent dialogue with verification of understanding is needed between all DLR and DataHouse team members to successfully execute project and go-ive tasks.	
											A lesson learned from the eCMS Project is that a collaborative and open project team culture should be created at the start of the project and reinforced by leadership and governance throughout the project. New ideas and honest discussion should be encouraged.

"Develop COM activities to address identified awareness gaps or     pockets of resistance.     "Implement reinforcement mechanisms to support change and increase     adoption.	Ingular updates and estabilish regular touchpoints with external stakeholders. Refer to prior N&V Monthly Report for status updates before January 2022. 01/25/22: DUR held meetings leading up to go-live to prepare stakeholders in the first toluto of Phase 1 Content Management. DUR also plans to hold regular post go-live stand-up sessions to provide additional stakeholder support. DataHouse on-site resources will also help to provide users with training and engagement and oversite internals for the discretion of the state of the DCC rollout of Content Management to increase participation and engagement from assigned DLIt testers was made. resource engagement and oversethip remains low. Additional CCM plans and strategies are needed for the DCC rollout of Content Management as uell as for Phase 1 Case Management to increase tester support and confidence in the system. 02/24/22: DLIR held regular post go-live stand-up sessions to provide additional stakeholder support. OCM updates are regularly emailed to stakeholders on a weekly basis. However, resource engagement and ownership still remains low. 03/23/22: DLIR began to develop an OCM plan, surveys, and metrics to messure user participation and system utilization. Engagement and sumership from DLIR resources improved. Additional OCM plans and strategies are needed for other phases, including the upcoming Phase 1 Case Management go-live. 04/26/22: Project touchpoints with internal users on a weekly basis instead of having core team representatives distribute them. DUR is developing an OCM plan, event-driven surveys, and metrics to measure user participation and system utilization. 05/31/22: Project touchpoints with internal users are increasing with the recurring weekly emails and trainings. DLR also began to administer surveys to collect some OCM relevent data leading up to Phase 1 Case Management prepare individuals for change. Additional planning is needed for post go- live COM act

Risk Management 2019.07.PM09 Issue	Moderate High	identified, tracked, or reported resulting in the lack of understanding of potentia impacts across project team members and there are no mitigation plans to	the project to date with no history of any risks being closed. DLIR project team was not tracking any of its own risks or issues related to the project. A risk regarding the delay in the completion of the MOU agreement with DHS (refer to finding 2019.07.PMO4 and 20109.07.IT(01) was never	2019.07.PM09.R1	Formalize the Risk and Issue Management process.	A formalized process should clearly define responsibilities and steps in Open Identification, resolution and action items tracking, and escalation procedures.     •The project team must encourage open, transparent discussion about risks and issues.	Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22: Accuity decreased the severity rating from Level 1 (High) to Level 2 (Moderate). DLR and DataHouse mitigated Phase 1 Content Management gol-live risks by limiting rollout to a small number of users, prioritying issues	
		adequately address them.	Identified and the risk Identified in the Content Management Conversion and Migration (version 0.0) document (efert to finding 2019.07.17.04) was not included in the risks and issues log, inclusing an ineffective risk and issue management process. Based on information IV8V recommendations made during the assessment period, both DUR and DataHous have communicated a plan to start identifying and logging risks jointly onto DataHouse's log and reviewing them together weekly. As identification and mitigation or firsk and issues are critical to project success, a formal process should be implemented before moving forward in the project.		Conduct regular meetings to discuss project risks and issues.	<ul> <li>Include DataHouse and DLIR and, on occasion, the executive steering committee (refer to finding 2019.07.PG02).</li> <li>Perform a detailed review of new items, status of open items, risk/issue owners, and mitigation plans.</li> </ul>	and tasks that must be completed prior to go-live, and deferring other items to post go-live. This strategy helped to mitigate schedule risks for the Phase 1 Content Management go-live, but also increases risks for other phases due to the deferral of work. Risk mitigation plans for other phases of the project, including the quickly approaching Phase 1 Case Management go-live, need to be developed and implemented 102/24/22: DUR and DataHouse are working to address Phase 1 Content Management risks and issues but the time and effort that continues to be spent on Content Management is creating risks and issues for other phases. Risk mitigation plans for other phases of the project need to be developed and implemented.	
							critical that risk mitigation plans are developed and implemented to ensure the project stays on track with the proposed timeline and can successfully deploy the new system.	
							04/26/22: DLIR and DataHouse need to actively monitor and aggressively mitigate risks related to the upcoming Phase 1 Case Maragement go-live. Task delays in the new schedule and the large number of open risks and issues collectively may have a significant impact on DLIR operations if not addressed prior to go-live. Improvements in nick management processes are needed to consistently and proactively mitigate risks.	
							05/31/22: Accuity increased the severity rating from Level 2 (Moderate) to Level 1 (High) as ineffective risk management is resulting in reoccurring issues. Despite early warning signs a few weeks out from Phase 1 Case Management go-live and even at the time of ESC approval of the revised timelines, risk were not proactively discussed or addressed. As a result, the go-live is to be deferred again. There are also signs of risk with regards to the new proposed Phase 1 Case Management go-live that should be analyzed and the mitigation plan should be included as a part of the presentation to ESC.	
							A lesson learned from the eCMS Project is that ineffective risk management processes will result in reoccurring issues. Risks are typically discussed when the impact is imminent. Effective performance of risk management requires discipline and rigor. Industry best practices should be incorporated and appropriately tailored to the project. Adequate resources from the vendor and the State with the appropriate experience or training should be assigned to perform risk management activities.	
cope and 2019.07.PM10 Issue equirements Ianagement	High High	The Content Management and Case Management requirements documentation is incomplete.	The requirements for both Content Management and Case Management have already been approved; however, the requirements are incomplete (e.g. do not incorporte ail contract requirements and all three project phases) and the descriptions in the Requirements Traceability Matrix (TMM) lack sufficient detail. The current RTM also does not link operational and project objectives to design artifacts. Furthermore, the RTM does not include non-functional requirements, including compliance with Hawaii Revised Statuse, Hawaii Administrative Rules and security	2019.07.PM10.R1	Revise Content Management and Case management requirements documentation and RTM.	Ensure requirements follow SMART (pscfift, measurable, actionable, Copen relatist and time bound guidelines.     •Ensure requirements isted in the DataHouse contract, all requirements identified during the stakeholder sessions, and for all three phases of the aCMS Project.     •Ensure requirements include functional, performance, process, non- functional, security, and interface requirements.	Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22 and 02/24/22: Requirements continue to be clarified and refined during Phase 1 UAT and Phase 2 development. It is unclear how the feedback from SMEs are used to update requirements documentation. 03/23/22: Phase 3 requirements gathering is resumed and the requirements deliverable was deferred to the end of March 2022. DLR is in procurement	
			requirements. Requirements management is a part of the Project Management Plan developed by DataHouse; however, the plan is not comprehensive. The Project Management Plan (version 1.2) was updated to include additional details regarding requirements management. While this is an improvement over the previous version, the latest draft plan still does not	2019.07.PM10.R2	Improve requirements managemen processes.	Ensure that there is a clear understanding botween DataHouse and DLR regarding who is responsible for identifying and tracking different types of requirements. =0evelop a process for prioritizing and reporting requirements. =0evelop a process for tracing requirements to specific system design elements.	for a new business analysic contractor that will serve as a liaison to external stakeholders and heip to collect external stakeholder requirements for the Plase 3 portal. It is unclear how these requirements will be incorporated into DataHouse's Phase 3 requirements deliverable and development processes. 04/26/22: The Phase 3 requirements deliverable was provided and is	
			provide adequate details regarding the requirements prioritization process, the traceability structure, and how requirements will be reported. As requirements are the foundation for proper system design,				pending DLR's review and approval. It is still unclear how requirements collected by the new business analyst contractor will be incorporated into the Phase 3 requirements deliverable. 05/31/22: Inadequate management of requirements is evidenced by Phase	
			development, and testing, it is essential that requirements documentation are complete and meet industry standards and best practices. Requirements documentation should be revised and requirements management processes should be improved prior to moving forward in the project.				1 UAT progress, results, and user satisfaction. DLR's approach to ensure the completeness of requirements was to develop text cases to confirm all stakeholder and business needs were met. However, this approach identified missing requirements or issues too late in the process and it is unclear what will be addressed as part of the Phase 1 Case Management go- live. A lesson learned from Phase 1 is not to wait until UAT to verify completeness	
							A lesson learnes from masse 1 is not to wait until UAI to verny competences and accuracy of requirements. Significant changes in requirements management processes should be immediately implemented including collecting and tracking requirements from assissions with end users, updating requirements documentation based on end user sessions and feedback, tracing contract requirements to requirements documentation, reviewing requirements deliverables for completeness and accuracy, and assessing during each development sprint cycle that requirements are preliminarily	
							satisfied.

and Resource Management	2017.07.1 111	- 1500	, ign	. igi	may lead to project delays, reduced project performance, or turnover of project resources.	project schedule information (refer to finding 2019.07.PM13); however, based on observations of the eCMS Project team, the DataHouse and DLIR Project Managers appear to be over-tasked. The DLIR Project Manager is the only full-time DLIR employee assigned to the eCMS Project and understandably does not have time to perform all of the tasks	2017.07.1 1014.01	and acquire additional resources.	finding 2019.07.IT01) and missing tasks (refer to finding 2019.07.PM13). Ensure resource levels and skill sets align to assigned tasks.	01/25/22: Resource management is one of the issues with the greatest impact to overall project performance and success. DLIR onboarded additional resources for UAT but progress is slow, resource engagement and womenship remains low, and resourcing levels are still below the required	
							2019.07.PM14.R2		<ul> <li>Consider including resources needed and estimated hours for Consider including DLIR resources needed and estimated hours for porning project activities (e.g., design sessions, user demonstrations, or user testing).</li> </ul>	numbers needed. DataHouse committed additional project management resources as well as on-site resources to support DLR testing. Troubleshooting, and training. DLR plans to onboard additional testing resources and is in the process of procuring data conversion resources. 02/24/22: DLR onboarded additional resources for UAT and is in the process of procuring additional resources. Resource engagement and ownership remains low. DLR should continue pursuing resource management strategies. 03/23/22: Accuity decreased the severity rating from Level 1 (High) to Level 2 (Moderate) as DLR is in the process of executing three contracts that will provide additional business analyst and data conversion resources. 04/26/22: The contract status for the business analyst and data conversion resources is still pending. 05/31/22: Accuity increased the severity rating from Level 2 (Moderate) to Level 1 (High) additional project resources are needed for Phase 1 Case Management activities. DLR procurements of BA and paper scanning resources were approved which will help to add resources to select areas of the project team. A lesson learned from the eCMS Project is that State resources planning to provide additulty scoped to ensure there are adequate resources to perform critical project os et Resource planning should include backfilling project resources to prevent conflict with operational duties and priorities. Assigned project training to be able to adequately fulfill their respective project roles.	
System Software, Hardware, and Integrations	2019.07.1T02	Risk	Moderate	Moderate	An unclear interface solution may impact the design process and require additional effort to correct.	The Content Management Design (sersion 1.0) document was approved by DLR on May 6, 2019. Case Management is currently in the design phase and design documents have not been provided. Although the Content Management design document was completed and Case Management design is in progress, the exact interface solution has not been defined. The interface between Content and Case Management are integral to the success of the project and should be fully defined in design documents in accordance with industry standards. Due to the recent DHS development, the interface options will need to also be researched and analyzed depending on the alternative solution selected. However, even prior to this development, DLIR din to have a clear understanding of the interface solution as veta-time, security, cost and maintenance of the proposed interface solution between SaleSioce and FileNet. The interface solution should be clarky analyzed, documented, mapped to project requirements, and communicated to DLIR.	2019.07.IT02.R2	Document the interface solution and analysis. Update the project schedule to define resources assigned to each of the interface-related activities. Verify the proposed interface solution will work.	Documentation should provide a clear understanding on the interface obtion including the following: * How Saledroce will guery the selected Content Management solution * How Falsaries uploaded to selected Content Management solution from Salesforce * Who is responsible for setup, configuration, and maintenance and the steps required for implementation * What are the costs associated for development and long-term maintenance	Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22, 02/24/22, and 03/23/22: Interface requirements were raised during Phase 2 design sessions but the interface solution is still unclear. 04/24/22: DUR and DataHouse met with NCCI to discuss integration options and potential timing of NCCI changes. 05/31/22: Questions and concerns about the design of the Salesforce to Content Management Integration were raised during Phase 1 Case Management UAT. It is unclear how this will be resolved or the additional effort to correct. A lesson learned from Phase 1 is that additional time should be spent to ensure that DUR understands how integrations will work. DUR should seek additional clarification for Phase 2 integrations, especially with regards to external systems.	
Ouality Management and Testing	2019.07.IT05	Issue	High	High	Not having an approved quality management plan and assigned quality assurance resources may impact the quality of project deliverables.	The Quality Management Plan (version 0.1) was drafted by DataHouse on Jane 23, 2019 but was not yet approved by DLR. The draft plan did not include quality metrics, quality isnandards, or quality objectives of the project and does not describe how quality control results will be documented or reported. Additionally, the Quality Assurance Lead identified in DataHouse's BAFO is not assigned to the project team at this time. As it is almost eleven months into the eCMS Project and several deliverables were already approved and many are pending approval, it is assigned to perform quality management plan to be formalized and resources assigned to perform quality management activities.	2019.07.IT05.R1 2019.07.IT05.R2	Finalize the quality management plan. Perform quality management activities on previously approved or submitted deliverables.	DataHouse and DLIR should collaborate and agree on the quality     management processes and metrics that will best serve this project.     Wholde quality standards or reference to specific criteria (sfer to     inding 2019/07.PM03).     Update the project schedule to assign quality assurance resources     (refer to finding 2019/07.PM14).	Refer to prior V&V Monthly Report for status updates before January 2022. 01/25/22: Critical Phase 1 Content Management UAT issues were addressed for go-live but a number of pending issues are to be addressed post go-live. Uality review processes and quality metric thresholds are still unclear. 02/24/22: A number of technical issues were encountered post go-live with the Phase 1 Content Management system including performance, reliability, functionality, and data. Quality management processes should be reassessed to help minimize production issues in future phases. 03/23/22, 04/26/22, and 05/31/22: DLR and DataHouse still do not have formal quality management phase. Quality metrics are critical for evaluating and monitoring project activities for acceptance and go-live readness, which is especially critical for the upcoming Phase 1 Case Management go-live to prevent similar production issues experienced with Content Management. A lesson learned from Phase 1 Content Management is that the deferal of numerous quality and performance issues and users having to revert to the legacy system to perform their work. Quality metrics should be used objectively to make critical go-live decisions.	

ASSESSMENT			ORIGINAL	CURRENT					FINDIN			
CATEGORY	FINDING ID	TYPE	SEVERITY	SEVERITY	FINDING	ANALYSIS	RECOMMENDATION ID	RECOMMENDATION	SUPPLEMENTAL RECOMMENDATION STATUS	FINDING STATUS UPDATE CLOS	SED DATE	CLOSURE REASON
Configuration Management	2019.07.IT06	Risk	Moderate	Moderate	A lack of a configuration management Jenn may impact the performance and quality of the system if unauthorized or untested changes are promoted between environments.	A configuration management plan has not yet been drafted. DataHouse plans to prepare a configuration management plan by October 11, 2019. Based on the current project plan, the eCMS Project was supposed to begin the Build stage of Phasa 1. Although the recent DHS development will likely delay the start of the Build stage, not having a configuration management plan in place increases the concern that changes may not be properly tested, accepted and approved which may impact system performance or quality.	2019.07.IT06.R1	Develop a formal configuration management plan.	•Ensure the plan is in accordance with IEEE 828-2012 – Standard for Configuration Management hystems and Software Engineering and includes the configuration management planning process, configuration identification process, configuration change control process, configuration status accounting process, configuration auditing process, interface control process, and release management process. •DataHouse and DLR should collaborate and agree on the configuration management plan purposes and processes that will best serve this project.	Refer to prior IV&V Monthly Report for status updates before January 2022. 01/25/22, 02/24/22, and 03/23/22: No updates to report. 04/26/22: DataHouse provided an updated Case Management configuration management document to include the Phase 2 Salesforce environments: Additional details regarding a comprehensive configuration management plan are needed. 05/31/22: No updates to report. A lesson learned from the eCMS Project is to clarify configuration management processes and tools for the vendor and State. Required State configuration management tools should be identified early. DLR should include a configuration management plan deliverable in the vendor contract and any requirements for specific configuration management tools.		
Security	2019.07.1107		Low	Moderate	Not having an approved security management plan in place may impact the security and privacy of the data.	The Security Management Plan (ersion 0.0) was prepared by DataHouse on June 3, 2019 but was not yet approved by DUR. Based on the current project plan, the eCMS Project was supposed to begin the Build stage of Phase 1. Although the recent DHS development will likely dealy the start of the Build stage, ont having as exurity management plan in place may result in improperly defined security requirements and may preclude the adequacy of the system to support the data needs of the system. Security controls should be defined in the security management plan and implemented as part of an organization-wide process that manages information security and privacy risk.	2019.07.IT07.R2	Ensure the security management plan meets specific standards. Finalize the security management plan.	Consider working with ETS or other State agencies still using Lotus     Closed	Refer to prior IV&V Monthly Report for status updates before January 2022.           01/25/22:         DLIR and DataHouse documented critical security tasks in the go/no-go checklist.           02/24/22:         DataHouse documented critical security tasks in the go/no-go checklist.           02/24/22:         DataHouse completed the disaster recovery plan pending DLIR's review and approval.           03/23/22 and 04/26/22:         A clear plan for security management is needed especially for ongoing Phase 1 Content Management system operation as well as the upcoming Phase 1 Case Management go-live.           05/31/22:         DataHouse performed a vulnerability scan and remediation for the Content Management environments. It is unclear what the comprehensive security management pain soft the eCMS Project.           A lesson learned from the eCMS Project is to clarify security management plan doitentified early.         Du/B should include a security management tools should be identified early.           Management plan deliverable in the vendor contract and any requirements for specific security policies and security management tools.         Du/B should continue to work closely with the ETS Chief Information Security Officer (CISO).           Refer to prior IV&V Monthly Report for status updates before October 2021.         4/26	5/2022	Closed as DLIR accepts the residual risks and they have a resource from the mainland
Date Conversion	2017.07.1103	i u sk			Insupported Unit Cost and The Source Control Case Management may impact the execution of data conversion activities. (Updated)	In sweed right reported in the september 2017 rVer winning respon- se a preliminary concern but is upgraded to a risk in this report. The current case management system, IBM Lotus Notes Domino, is no longer supported. The product was sold by IBM to HCL Technologies, an Indian IT company. DLR's licenses for the product ended in June 2019 and DLR is unable to renew the licenses as HCL Technologies is not a State Procurement Office (SPO) compliant vendor. This system will be replaced by the eCMS Case Management solution which was scheduled to go-live in November 2020 but this was tentatively pushed back to June 2021. Any major issues with the current system may impact the data conversion process leading up to the go-live date and potentially the overall system development.	2017/07/105/0	support.	Notes to get vendor approved and support contract in place.	Neer to prior rever montany negoti for status oppares belone October 2011 4/20 10/26/21, 11/29/21, 12/29/21, 01/25/22, 02/24/22, and 03/23/22: No updates to report. 04/26/22: DLR has a resource who supports the IBM Lotus Notes Domino system.	× 2022	Closed as Denracopys the resound has and they have a resource non-nite manuand who supports the system.
Project Organization and Management	2019.09.PM01	Issue	Moderate	Moderate	The documented change management process was not followed as prescribed.	management process that includes Change Requests, impact assessments, and a Change Log. The change to AWS (refer to finding 2019;07:1101 in Appendix D) and the revision of the Content Management go-live date were approved by DLIR but not documented in Change Requests or a Change Log. Additionally, the change management process does not have built in mechanisms to ensure that impacted documents are updated for the change and changes are appropriately communicated to impacted stakeholders.	2019.09.PM01.R1 2019.09.PM01.R2	Document changes in Change Requests, with an impact assessment, and the Change Log in accordance with the Project Management Plan. Refine the change management process for greater clarity and effectiveness.		04/27/21 and 05/27/21: No updates to report. 06/25/21: DUR plans to combine all the pending Datacap related change requests into one change request related to the new Encapture solution. 07/27/21: DataHouse drafted the new change request to document the switch from Datacap to Encapture; however, DUR has not yet approved the change request due to ongoing discussions of the proposed Content Management timeline. DataHouse should also document the resulting project schedule changes for Phase IB, 2, and 3 in a formal change request as prescribed by the Project Management Plan. 08/25/21 and 09/28/21: The Content Management change request is pending DUR approval. 10/26/21: Accuity decreased the severity rating from Level 1 (High) to Level	5/2022	Although change requests do not document changes in detail and change requests are not used to document major schedule changes, the current change management process appears to work for the project.
									Independent a ultimose constraint on the Consigned tog to oppose a en made to a linear constraint of the constraint of	2 (Moderate). Although the details of the change request to switch from Dataca to the nexptive were not updated, Databuse did updates the Content Management design deliverable to document how the replacement solution will address some of the gaps identified in feedback and issues from the previous Content Management solution UAT. DUR agreed that this approach would address the lack of details in the change request. Additionally, schedule changes continue to not be documented in formal change request. However, DUR and DataHouse do present the high-level timelines to the ESC for approval. 11/29/21 and 12/29/21: No updates to report. 01/25/22: As DUR approved the Phase 1 Content Management replacement solution. It appears that the change from Datacapt to Encapture did address the gaps, feedback, and issues from the previous solution. Additionally, feedback and resulting redevelopment work during Content Management UAT did not result in additional DataHouse change requests.

Guality Management and Testing	2020.02.0701	Risk	High	Moderate	and does not adequately inform DLIR of	DataHouse drafted the Test Plan Version 0.0, pending DLIR review and paproval. The test plan does not include or clarity explain the following: • The scope of the test plan is incomplete (e.g., performance, load, volume, AWE environment3). • The testing approach differs from DataHouse's Best and Final Offer (BAFO) (e.g., regression testing, test-driven development (TDD)). • The security testing does not address all security requirements outlined in the DataHouse contract or verbally discussed with DataHouse (e.g., AWS withreability scan). • Specifics of the test approach are not detailed (e.g., test design techniques for all testing types, automation testing tools, test data requirements, data scrubbing procedures, metrics for test cases and coverage of code). • The test tasks included in the project schedule are incomplete (e.g., • security tests, test plan Section 8 task). • Incomplete test plan Section 8 task). • Incomplete test plan Section 8 task). • There are no defined test management monitoring and control processare endende test management monitoring and control processare incomments of test documentation files is not established for easy retrieval and location. A naming convention of test documentation files is not established for easy retrieval and location. A lack of clarity of DataHouse's testing approach may not allow DLIR to appropriately develop their own test plan or ensure testing activities are edequately performed. Additionally, a lack of mutual understanding and inadequate test management processes could impact the execution of testing activities.	2020.02.IT01.R2	Clarify the test approach. Develop adequate test management processes and procedures.	Perform a deliverable review (refer to finding 2019.07.PM03) to ensure DLR understands the test plan and scope. •Consider making improvements to the test documentation. •Consider a process for monitoring and reporting test status and results. •Consider a process for authorization of test data.	-	Refer to prior IV&V Monthly Report for status updates before April 2021. 04/27/21, 05/27/21, 04/25/21, 07/27/21, 08/25/21, and 09/28/21: No updates to report. 10/26/21 and 11/29/21: Clarification of the test approach and plans for Phase 1 Content Management performance testing is needed including roles and responsibilities, tasks and dates, and the process for baseline performance metrics collection. 12/29/21: DataHouse confirmed that they are not responsible for performance, load, stress, or failover/recovery testing. DataHouse also clarified they will only provide tests cripts and the pass or fail status of system testing and that their quality testing is a reperformance of select system testing and will be reflected in the same system testing pass or fail status. DataHouse will address any issues encountered during their testing but will not share any issue logs with DUR.		Closed as DLIR accepted the risk related to DataHouse's clarified scope of their testing and how DataHouse testing results will be provided to DLIR.
System Software, Hardware, and Integrations	2021.03.001	Issue	High	High	Ongoing Content Management technical issues and solution analysis are causing project delays.	Since December 2020, DLR and DataHouse have been performing various system analysis due to Phase 1 Content Management UAT technical issues and user feedback. In March 2201, DataHouse presented three options to the ESC for the Content Management solution including an option to replace and redevelop the Content Management scanning and data extraction component. DLR is currently evaluating the options presented by DataHouse. DLR planned to hold a special ESC meeting on March 25, 2021 to make a decision regarding the Content Management solution but postponed withis in order to allow more time for additional analysis. The Content Management go-live was postponed several times due to orgonig analysis and could potentially delay the go-live for several months more. It is critical for DLR and DataHouse to work together to timely and thoroughly complete analysis and agree upon how to proceed. In addition to the specific recommendations made as a part of this finding, the WAV recommendations made as a part of this inding, the WAV recommendations made as halfoings 2020.12.1701, 2019.07.PM10, and 2019.10.PM01 will also help to address this issue.	2021.03.IT01.R2	Identify all major gaps in current solution. Complete the analysis of solution options.	<ul> <li>Review the reported issues/defects in the UAT quality log, close resolved entries, and identify unresolved gaps.</li> <li>Review other project documentation and perform further system review to identify other major gaps.</li> <li>Assign risk/criticality ratings for each identified gap.</li> <li>Evaluate how each option addresses all major gaps.</li> <li>DataHouse should provide additional clarification and demonstration of the functionality to be provided by each of the options as it relates to the stand-alone Content Management Solution and the integrated Case Management solution. This will help DLIR to understand the comprehensive solution and to identify limitations that are only temporary until additional functionality is provided in later phases.</li> <li>Consider inpacts to current phase as well as total solution/project; short-term costs and total cost of ownership (TCO); and impacts to the implementation plan and users.</li> </ul>		04/27/21: DataHouse is still working to investigate and address ongoing technical issues. DLR continues to evaluate the options presented by DataHouse and Degan to review unresolved issues from UAIT to perform their gap analysis. DLR needs to work with DataHouse to swifty complete the analysis. 05/27/21: DataHouse is still working to address Datacap issues requiring fixes. DLR and DataHouse agreed on a tentative plan and timeline of tasks to reach a decision regarding the Content Management solution by July 2021. DLR made the decision to replace and redevelop the Content Management solution and yas analysis. 07/27/21: DLR made the decision to replace and redevelop the Content Management solution and gap analysis. 07/27/21. 08/25/21: and 09/28/21: Completion of DLR's Content Management solution analysis is still pending. 10/26/21: A solution analysis is still pending. 10/26/21: A solution analysis will not be prepared to formally document how the replacement Content Management design of the replacement Content Management design and the replacement content Management design of the replacement solution will address some of the gaps identified in feedback and issues from the prior solution will address some of the gaps identified in the terhical issues from the prior solution will address some of the gaps identified in the terhical issues from the prior solution will address to solution and confirmed that DataHouse functional testing verified that the prior content Management solution. Bay addressed will be addressed will be addressed will be replacement solution.		DLIR will not be preparing a formal and comprehensive solution analysis; however, this finding is closed as the solution analysis is captured in the ESC presentation, the updated Context Management clearly needed and the Encapture architecture and workflow overview meeting. The ongoing technical issues related to the Encapture replacement solution are not tracked in an IV&V finding as these are already tracked in the testing logs.

Project Organization and Management	2020.03.PM01 Issu	High	Moderate	project execution although the extent of the impact to project costs and the project schedule as well as the potentia	The COVID-19 pandemic has created uncertainty with respect to the filmely completion of the project and its cost. Understandably, DLR bad diverted project resources to the UD livision to respond to the l skyrocketing number of unemployment claims. This finding focuses on the impacts of COVID-19 specific to the eCMS Project. The following is a summary of the related events and facts: «All eCMS Project meetings avec cancelled beginning March 17, 2020	2020.03.PM01.R1	project moving forward with available resources.	Evaluate DLIR SMEs availability and bandwidth to work on the project. Clos     Consider reshuffling of user stories in current and upcoming sprints     and how to best utilize available DLIR SMEs.	Refer to the June 2020 IV&V Monthly Report for status updates prior to July     2/25/2021     2020.     07/29/20: COVID-19 continues to impact the availability of DLIR project     resources. A few of the DLIR project resources, including the DLIR Project     Manager, returned to the project on a limited basis and additional DLIR     project resources are expected to have some availability in the upcoming     months as DCD employees are slowly templiced back from the UI Division.	Although there will continue to be impacts of the pandemic on costs, schedule, and resources, Accuity will continue to monitor these under the other existing findings (2019.09.PM02, 2019.07.PM12, 2019.07.PM.13, and 2019.07.14).
					<ul> <li>Vali ec. White Tree Services and Services (ETS) and DLR Betcrotic Services has been put on being and close services and services have been the services of the services of the services of the services of the service of</li></ul>		Formulate a plan for how to respond to COVID-19 impacts to the project.	Database and DLR, with input from the ESC, must come together to decide on how to best proceed. "Carefully assess the situation and individually log all of the specific impacts to the project in the risk register, including direct and indirect impacts. "Evolutes alumentive course of action and contingency plans for each specific impact identified. "Consider adjusting the frequency of communications and reviews of response plans to support the pace of evolving circumstances.	Month as LCD employees are solving transformed back from the ULDWsion. With recent increases in cases in Hawaii, croumstances could potentially evolve rapidly. While the plan to move forward with Phase 2 work gives DataFources will always be needed. Making improvements for identified deficiencies (2020/27M01) and twe kys foundational project processes including schedule management (2019/07/M01), and risk management (2019/07/M02), change management (2019/07/M01), and risk management (2019/07/M02) will better position the project to handle and adjust to changes going forward. 08/21/20: DataHouse kicked-off Phase 2 requirements gathering sessions. With fhase 1 activities scheduled to resume simultaneously with ongoing Phase 2 activities, additional clarity is still needed regarding the path forward. Additionally, the worsening COVID-19 situation in Hawaii creates a lot of uncertainty with regards to DLR project activities as well as contingency plans for ky project resources and possible work-from-home arrangements are essential to minimizing further delays. 09/28/20, 10/23/20, 11/24/20, 12/23/20, and 01/26/21: No updates to report. 02/23/21, 03/24/21, 04/27/21, and 05/27/21: DLR and DataHouse should consider the contruling impacts the COVID-19 pandemic will have on the avalagement anajesis and decision and while reprioritizing project goals and priorities. 06/25/21: Almost all employees returned to DCD as of June and DLIR is able to make necessary procurements for the eCMS Project.	
Project Organization and Management	2020.08.PM01 Ria	< Moderate	Moderate	Inadequate planning and lack of a detailed project schedule for Phase 2 may impact the execution of Phase 2 activities and result in delays.	DataFours <sup>6</sup> updated project management plan and project schedule was scheduled for completion in July 2020. The task is not yet completed and there is no estimated timeline for completion. Some of the details of the Phase 2 planning were verbally discussed including DataFours <sup>6</sup> deliverables, assigned resources, and general approach; however, additional planning is needed. The current project management plan was last updated in August 2019 and many of the processes are outdated or need improvement (020.07 MOI). Additionally the ed/K Project is now operating under completely different circumstances due to the COVID-19 pandemic (2020.03 PMOI). How Phase 1 and Phase 2 activities will be performed simultaneously with limited DLR project resources; priority of Phase 1 or Phase 2 tasks; "Drocess for resolving schedule ordino conflicts. "Detailed project schedule with Phase 2 tasks, due dates, and required resources. "Improved process for management and Cask Management components for the Phase and responsibilities for Phase 2 barbuose and DLIR project team "Robes and responsibilities for Phase 2 barbuose and DLIR project team "Robes and responsibilities for Phase 2 barbuose and DLIR project team "Robes and responsibilities for Phase 2 barbuose and DLIR project team members. *Probase of standard project mongement communication of Phase 2 limenta and casternal stateholders; alternative communication of Anaes in rangements. *Process and metrics for project mongement project team rangements.		Complete Phase 2 planning.	•Ensure mutual understanding of Phase 2 plan and approach between DataHouse and DJR. •Provide adequate details of Phase 2 in the project schedule. •Consider building contingency plans for COVID-19 into the project management plan and processes.	eed         09/28/20: DataHouse updated the project management plans to include some additional details regarding These 2 deliverables and several project management processes. Additional clarification of project management processes (e.g., performance metrics, monitoring DLR project resource workloads, resolving conflicts, or priorities for phases), contingency plans, and the project schedule are still needed.         10/23/2020           10/23/20: DataHouse and DLR discussed and clarified project management processes. In general, project performance metrics are not collected or monitored. Instead DLRHouse primarily uses the project tachedule to manage and monitor project performance. DataHouse and DLR clarified processes for resolving conflicts or changes in resource availability and priorities for phases. DataHouse has not yet added the detailed tasks for Phase 2 beyond the planning stage and plants to add more detailed tasks for Phase 2 beyond the planning stage and plants to add more detailed tasks an more specific project information (e.g., features, number of epica) is determined.           The Case Management development team also monitors progress with stats on the number of user stories completed in each sprint and the number in the backlog.	Closed as DataHouse and DUR discussed project management processes. The need for a more detailed Phase 2 project schedule and improvements in project management processes will continue to be monitored under the 2019.07.PM09 Risk Management, 2019.07.PM15 Schedule Management, 2019.07.PM14 Inadequate Resources, and 2019.09.PM02 Resource Management findings.

Governance Effectiveness	2019.07.PG01 Posi	ive N/A	N/A	The DCD Executive Sponsor is highly engaged and plays an active and visible role in guiding, monitoring, and championing the eCMS Project.	The DCD Executive Sponsor's close involvement in the project has provided strong leadership that has, to an extent, compensated for the lack of formal governance (effect to finding 2019/07.602) and other project deficiencies noted throughout this report. However, as importan as good sponsorible is, this factor alone can not be relied upon to guarantee project success.	N/A	N/A for positive findings.	N/A for positive findings.	Closed	N/A	9/20/2019	Closed as this is a positive finding.
Governance Effectiveness	2019.07.PG02 Risk	Moderate	N/A	The lack of a formal executive steering committee and change control board may limit the effectiveness of project governance.	The DataHouse proposal and Project Management Plan (version 1.2) make references to a steering committee, however, a formal committee was not charteed. Currently, the DCD Executive Sponsor is assigned th authority in the Project Management Plan to approve all project changes	2019.07.PG02.R1 e	Assemble and formalize an executive steering committee.	The size and selection of committee members should balance the representation of key stakeholders with the need for efficient decision making. #Formalize the committee mission, responsibilities, and the types and the thresholds of decisions that need committee approval in a steering committee charter. Consider the need or ease of creating a change control board with a subset of the committee for certain types of decisions.	Closed	09/20/19: Accuity decreased the severity rating from Level 2 (Moderate) to Level 3 (Low). The eCMS Executive Steering Committee (ESC) was assembled and held is first metring on September 13, 2019. Members were informed of the committee's purpose, roles, and member tasks; however, the types and thresholds of decisions that need committee approval or attention was not formalized. The next meeting is scheduled for October 11, 2019. 10/25/19: The October 11, 2019 ESC meeting was effectively run by the DCD Project Sponsor to discuss key risks and issues and to align the eCMS Project direction with DLR and ETS strategic clocitives. The thresholds for decisions that require committee attention were also established.	10/25/2019	Closed as the eCMS ESC was formalized.
Governance Effectiveness	2019.07.PG03 Risk		N/A	may limit objective evaluation of contractor performance and contract fulfillment.	evaluation criteria for accepting deliverables, and clear delineation of roles and responsibilities. There has already beam confusion or misunderstandings due to unclear contract terms in the areas of form design, risk and issue tracking (refer to finding 2019.07.PM07), requirements tracking (refer to finding 2019.07.PM07), Additionally, the lack of specific acceptance criteria has led to approval of deliverables that do not meet industry standards (refer to finding 2019.07.PM07). Additionally, the lack or has already prepared certain management plans and project documents and has been amenable to providing certain additional deliverables though they were not clearly required to by the RPO or contract. Clear contract terms set expectations for deliverables and will asist DUR to ensure that contractors fulfill obligations to the standard of quality that is required.		Evaluate the need for a contract modification to clarify contract terms.	•Consider including key project documents as deliverables such as a requirements management plan and requirements traceability matrix (RMI) (refer to finding 2019.07.MDI), risk and suce log (refer to finding 2019.07.PM09), and testing documentation. •Consider including acceptance criteria based on industry standards. For example, the acceptance criteria based on industry standards. Consider including measurable success metrics (refer to finding 2019.07.PG05). •Consider the need to outline roles and responsibilities between DLIR and DataHouse (refer to finding 2019.07.PM02).		project plans. DataHouse has shown an openness to develop and continuously improve project deliverables including project plans. Roles and responsibilities have been more openly discussed and plan to be incorporated within project plans. Furthermore, success and quality metrics are being drafted which will also be an additional method for evaluating contractor performance and fulfiliment.		Closed as DLIR will address through project plan updates. The need for clarification of roles and responsibilities as well as acceptance criteria and success metrics will continue to be monitored under the 2019/07-PG04 Success Metrics, 2019.07, MD2 Project Organization, 2019.07.PM03 Deliverable Review, and 2019.07.IT05 Quality Management findings.
Governance Effectiveness	2019.07.PG04 Risk	Low	N/A	The lack of guidelines, checklists, and shared project assets may reduce project performance and efficiency.	Large TI projects are not a regular occurrence for many State departments. Often times project resources are assigned from within th departments that have valuable organizational and operational knowledge but do not have the necessary project management experience. Having guidelines and checklists and access to project documents from past State projects would greatly benefit even experienced project teams. ETS, as the State of Hawaii's IT oversight office, is in the best position to gather project assets and put forth guidelines.	2019.07.PG04.R1	Initiate conversations with ETS to discuss DLIR IT and project suppor needs and responsibilities.	•Discuss what resources, guidance, and shared project assets would be t most helpful to DLR. •Discuss what project assets DLIR can provide to contribute to the development of a centralized project management library. •Consider involving the project stering committee to align and clarify ETS vs. steering committee governing roles.		09/20/19: ETS began sharing best practices and lessons learned with DUR including taking the DLIR Project Manager to sprint meetings for another State project. ETS is a member of the newly formed eCMS Executive Steering Committee (ESC) and will use that vehicle to share lessons learned with DLR. Additionally, DLIR is forming a DLIR TS Steering Committee to provide oversight to all DLIR IT projects. The DCD Executive Sponsor is a member of that DLIR committee and plans to share eCMS lessons learned and project templates with other DLIR IT projects.	9/20/2019	Closed as discussions occurred with ETS and the risk is adequately mitigated with the planned course of action.

Benefits Realization	2019.07.PG0		Low	N/A	Project modernization objectives may reduce the operational improvements that are achieved.	The eCMS Project's primary modernization objective is to move to a paperless and automated business process. The new system is being designed to allow for electronic filing, routing, and tracking of forms. However, current disability compensation statutes have not been revised to require that these forms are filed electronically by law. As such, manual paper forms may continue to be submitted by external users such as claimants, employers, and insurance companies. As the development of a portal for public filing will not begin until Phase 3, this risk is not as imminent. However, as the evaluation of potential impacts, collection of tedback from stakeholders, and the legislative process to amend statutes is a long process, the initial planning should begin as early as possible to as not to postpone or reduce the realization of the benefits from the new system.	2019.07.PG06.R1	Develop a plan and timeline to amend the statutes to align to project and organizational objectives.		Closed	representatives from various DCD-related sakeholder groups. The WG provides an avenue for URI to understand stakeholders' concerns and a forum for the stakeholders to understand takeholders' concerns and a fingent for the stakeholders to understand takeholders' concerns linges. DLIR plans to draft statutory changes to mandate electronic claim filings. DLIR plans to draft statutory changes to mandate electronic filing in FY2022 (effective July 1, 2023). This timeframe was decided on as it allows DLIR to proactively involve stakeholders in testing production and provide stakeholders the appropriate time to ready their systems for electronic filing.		Closed as DUR has a plan to align statutes with eCMS Project objectives.
Project Organization and Management		01 Positive	N/A	N/A	The DLIR Project Manager is a dedicated project lead who works collaboratively with internal stakeholders.	The DLIR Project Manager is hardworking and has continually demonstrated declaration to the project and an eagemest to learn. Additionally, the DLIR Project Manager has some of the necessary leadership qualities that make her a good project manager. Her positive nature and collaborative approach develops trust with and satisfies concerns of many internal stateholders. This has mitigated some of the communication and OCM risks (refer to findings 2019.07.PMM2 and 2019.07.PMM2. However, the DLIR Project Manager is the only full-time DLIR employee assigned to the eCMS Project and there is not a sufficient mount of project resources (refer to finding 2019.07.PMI4) to properly manage the project.	N/A	N/A for positive findings.	N/A for positive findings.	Closed			Closed as this is a positive finding.
Project Organization and	2019.07.PM0	)4 Issue	High	N/A	DataHouse proposed a solution on their		2019.07.PM04.R1	Finalize the MOU to leverage DHS's		Closed	09/20/19: The MOU with DHS for Datacap and FileNet licenses is close to being finalized. DLIR received a draft from DHS on September 1, 2019 and it was sent to the Attorney General's office on September 17, 2019. Accuity		negotiations. The recommendation to identify all critical tasks will continue to be monitored under the 2019.07.PM13 Schedule Management finding.
					Furthermore, the eCMS Project advanced for 10 months without a formal MOU between DLIR and DHS and religence on the Data House Project	support shared services. Once the eCMS Project was underway, the MOU discussions with DHS were primarily led by the DataHouse Project Sponsor. The eCMS Project advanced for 10 months without finalizing the MOU between DHS and DLIR. As the proposed solution is no longer which due the access DLI development are advanced for the pro-	2019.07.PM04.R2	DLIR should lead all discussions and negotiations of vendor contracts or agency agreements.			has observed that DLIR has led the contract discussions and negotiations with AWS.		
					sponsor to lead the discussions due to	viable due to the recent DHS development, an alternative solution must	2019.07.PM04.R3	Identify and complete all critical tasks prior to moving forward with					
					her experience with DHS.	be determined (refer to finding 2019.07.1001) and previously accepted or drafted deliverables may need to be updated. Although the eCMS Project will not be able to utilize DMS's IBM FileNet environment, the project still lipants to leverage DMS's IBM FileNet and Datacap. Before moving forward in the project, DLR should finalize all necessary agreements to ensure that the alternative solution is viable and prevent further delays.		an alternative solution.					
Project Organization and Management	2019.07.PM0	15 Risk	Moderate	N/A	A lack of clarity on DataHouse's development methodology may not allow or adequately prepare stakeholders to participate readily.	DataHouse is using a modified Agile development methodology that is referred to as "Water-Scrum-Fail". This is a combination of the waterfall and Agile methods that defines the full set of requirements at the beginning but uses Agile user stories and sprints while building the supposed to begin the Build stage of Phase 1 and transition to the Scrum methodology. Although the recent DHS development will likely delay the kickoff of this stage, there are a number of concerns regarding the transition to the Scrum methodology. •DataHouse has not yet fully determined the number, length, and details of the sprints. •The project schedule also does not yet reflect the agile sprints cycles or identify resources who are expected to participate.		Formalize an approach for executing Scrum phases.	-Consider industry best practices for Agile methodologies such as retrospectives, daily standups, bumdown charts, and frequent user demonstrations and feedback. -Establish the backlog preparation and refinement process. -Establish virual conferencing tools and communication protocols for geographically distributed team members. -Soft the number and length of the sprints. -Update the project schedule for sprint activities and assign resources (refer to finding 2019.07.PMI4). -Include clear and detailed procedures and roles and responsibilities for Scrum tasks (refer to finding 2019.07.PM02). -DUR should be included in project team activities (refer to finding 2019.07.PM02).	Closed	09/20/19: Accuity has kept the severity rating as Level 2 (Moderate). Although DataHouse has incorporated the Case Management sprint schedule into the overall project schedule and provided a high-level overview of the requirement/suer stores to be covered by each sprint, roles and responsibilities still need to be clearly defined and communicated. The Case Management development team follows a classic Scrum model and plans to clarity roles and responsibilities of Product Owners and users, how new requirements will be approved and prioritized, and acceptance criteria during the next user review and ppic 2. The Contert Management development team follows a semi-agile process and drafted an overview document of the team's change management practices. 10/25/19: The Case Management development team held a training for the DLIR Product Owners to provide an overview of be Scrum methodology and		Closed as the Scrum methodology has been formalized and was communicated to the DLR &CMS Product Owners. The recommendation to communicate the methodology to all impacted stakeholders will continue to be monitored under the 2019.07.PM07 Stakeholder Communications finding.
						stakeholders regarding the Scrum methodology or the roles and responsibilities they have during this stage of the project. •Many of the DataHouse project team members work remotely and are unable to work on-site.	2019.07.PM05.R2	Communicate the approach for executing Scrum phases to all team members and impacted stakeholders.			the Product Owner role and responsibilities.		
Business Process Reengineering	2019.07.PM1	11 Risk	Moderate	N/A	Not identifying and addressing BPR opportunities prior to system design and development may require additional effort to correct.	There is no formal plan for BPR activities. DataHouse's approach to BPR was to start with the current state process maps, walkthrough the process with stakeholders, and make updates to the processes maps. As a result of this process, DataHouse provided future state process maps. However, Team Acculty was unable to clearly updatestand how processes were pinoritized for change, root causes were addressed, or processes were improved (e.g., elimination of rework loops). Business process improvement is a key deliverable ildentified in the RFP and in DataHouse's contract. The DataHouse contract states that the key deliverable will be mainfielded through: faster throughput of data in the topster in the system: greater flexibility to make system changes; and online access and input by internal and external users. However, the RFP and contract do not clearly identify how this Gelverable will be supported, evaluated, or accepted by DLIR (refer to finding 2019.02.FGG3). There should be clear documentation on how the new solution plans on measuing and achieving key business process improvement performance goals. The IV&V recommendations made at 2019.02.FGG3.R1, 2019.02.FGG3.R2, and 2019.02.FGG5.R1, 2019.02.FGG3.R2, and 2019.02.FGG5.R3, 2019.02.FGG3.R2, and 2019.02.FGG5.R3, 2019.02.FGG3.R2, and 2019.02.FGG5.R3, 2019.02.FGG3.R2, and 2019.02.FGG5.R3, 2019.02.FGG3.R2, and 2019.02.FGG5.R3, 2019.02.FGG3.R2, and 2019.02.FGG5.R3, 2019.02.FGG3.R2, and 2019.02.FGG5.R4.	2019.07.PM11.R1	Identify and track BPR opportunitie in a log.	This log should be used to plan BPR and design activities and to develop content for communications and training.	Closed	09/20/19: Accuity has kept the severity rating as Level 2 (Moderate) as a process or tool for tracking BPR changes for future communications and training has not been created. 10/25/19 and 11/22/19: BPR opportunities continue to be discussed during sprint sessions; however, identified opportunities are not formally tracked. 12/20/19: The Case Management user story tracker tool identifies which user stories resulted in BPR.	12/20/2019	Closed as user stories resulting in significant BPR can be identified for communications and training.

System Software, Hardware, and Integrations	2019.07.IT01	Issue	High		DataHouse in their BAFO to leverage the existing DHS FileNet hosting infrastructure is no longer a feasible solution. Experimentation of the solution of the s	There are a number of items in the DataHouse BAFO that are no longer feasible based on the inability to leverage the existing DHS FlieNet environment. Under the original solution, DHS would monitor and maintain the enterprise IBM FileNet environment. As DHS will no longer be providing access to their IBM FileNet environment. DLR will need to identify resources to take on the monitoring and maintenance of the IBM FileNet infrastructure. As DataHouse recommended in the BAFO the on- premise installation for the IBM ECM solution due to the capture volume	2019.07.IT01.R1	Evaluate other total solution alternatives for an alternative solution.	Consider solutions that could include other technical applications that could utilize a different choice of methodology using different tools, provide a cheaper solution for the longer-term, and faster implementation. - Consider the following website which lists 20 competitive alternatives to IBM FileNet for consideration: www.g2.com/product/i/bm-filenet- content-manager/competitors/alternatives. Additional research could result in more extensive choices going forward.	Closed	09/20/19: In July 2019, DataHouse presented AWS as a potential alternative solution. The proposed AWS solution was compared to another cloud solution, Microsoft Aure, in respects to cost and performance. DataHouse reviewed the listing of content management solutions provided by Acculy and concluded that IBM FileNet was the best solution for this project; however, no formal analysis was prepared. DLIR approved AWS as the replacement hosting infrastructure solution effectively remediating the inability to leverage the DHS FileNet environment issue.	9/20/2019	Closed as a replacement solution was approved by DLIR. As a comprehensive analysis was not prepared and there is still a need for additional clarification regarding certain spects of the replacement solution, Accuty will continue to monitor plans for AWS security under finding 2019.07.1T07, AWS M&O roles and responsibilities under the new preliminary concern 2019.10.1T02, and AWS costs under finding 2019.07.PM12.
						and higher performance of document file transfers over the LAN and		Prepare a comprehensive technical analysis of the alternative solution.	<ul> <li>Include the impact of the alternative solution to project cost, schedule, resources, security, maintenance and operations, system software, hardware integration requirements, performance requirements, and required infrastructure to ensure a complete and successful working solution.</li> <li>Clearly define what needs to be completed, who is responsible, steps for completion, and timing.</li> <li>Considerations for impact on project cost includes costs related to the following:</li> <li>Processing, storage and connectivity</li> <li>Operating system and database management licensing</li> <li>Interfacing technologies</li> <li>Maintenance and operations.</li> <li>Data center, collocation facilities and availability requirements.</li> <li>If it is decided that FileNat is the most cost effective and efficient solution, renewal and ongoing cost of FileNet enterprise licensing</li> <li>Considerations for impact on project schedule, time estimates, and resources include:</li> <li>Acquigation, installation, and configuration of software and infrastructure</li> <li>Performance of security assements.</li> <li>Change and configuration for starting, updates)</li> <li>Performance of security assements.</li> <li>Change and configuration management.</li> </ul>		acuny to develope the Drin Herek environment asse. ccuity had also recommended that a comprehensive technical analysis be provide the environment of the second seco		
Design	2019.07.IT03	Issue	High			Case Management is currently in the design phase and design documents have not been provided. The Content Management Design (version 1.0) approved by DLIR on May 6, 2019. The recent DHS development will require design documents to be updated after an alternative Content Management hosting infrastructure solution is selected. However, even prior to this development, the Content Management design documents were darked based on requirements documentation that is incomplete (refer to finding 2019.07.PM10). The requirements document folicitonics should be remediated immediately and the design documents updated accordingly.	2019.07.IT03.R1	Update the Content Management design documents.	Consider updates for revised requirements documents (refer to finding 2019 07.PMI) and for the alternative Content Management hosting infrastructure solution (refer to finding 2019.07.IT01).		09/20/19: Acculty decreased the sevenity rating from Level 1 (High) to Level 2 (Moderate). DataHouse updated the Content Management Design Document to include additional, more detailed requirements. As noted above at finding 2019 07.PMIO DataHouse is in the process of updating the requirements documentation to include all requirements from the DataHouse contract. 10/20/19: The Content Management Design Document (version 1.2) was updated to refine or add requirements.	10/25/2019	Closed as the Content Management design documents are regularly updated as changes to regularly quiements are made. The completeness of the design with respect to contract requirements will continue to be monitored under the 2019.07.PM10 requirements finding.
Data Conversion	2019.07.IT04	Risk	Moderate		requirements may impact the data	Case Management is currently in the design phase and data conversion documents have not be drafted. The Content Management Conversion and Migration (version 0.0) document was drafted by DataNouse on June 3, 2019 but was not yet approved by DUR. The document was drafted based on requirements documentation that is incomplete (refer to finding 2019/07.PMI0). Furthermore, the Content Management Conversion and Migration (version 0.0) document included a risk that charges to the requirements fait a cattain point in the project may cause additional effort to re-factor the migration design process. As data conversion is the process of converting data from one source to suit the system requirements afrancher, it is important that the data conversion plan is based on accurate system requirements. The requirements document system requirements. The indud be remeduated dimendiately and the data conversion plan updated accordingly.	2019.07.1T04.R1	Update the Content Management data conversion plan.	Consider updates for revised requirements documents (refer to finding 2019.07.PM10).		09/20/19: Accuity has legt the sewrity rating as Level 2 Moderate). The Content Management Conversion and Migration Plin (version 11) was updated on 09/05/19 before the Content Management Design Document feerion 11) was updated on 09/15/19 to include additional design requirements. Changes to requirements should be evaluated for the impacts on the conversion and migration plans and the detailed taxonomy mapping. 10/25/19: DataHouse evaluated the new requirements and determined that there is no impact to the high level Content Management conversion requirements included in the Conversion and Migration Plan. 11/22/19: Accuity reviewed the taxonomy mapping with the primary stakeholder and confirmed that thonges in system requirements will not have a significant impact on the Content Management data conversion plan as the legacy system has limited data fields that are currently used.	11/22/2019	Closed as changes in system requirements do not appear to significantly impact the Content Management data conversion plan.
