November 20, 2024

The Honorable Ronald D. Kouchi President of the Senate and Members of the Senate Thirty-Second State Legislature State Capitol, Room 409 Honolulu, Hawai'i 96813 The Honorable Nadine K. Nakamura Speaker and Members of the House of Representatives Thirty-Second State Legislature State Capitol, Room 431 Honolulu, Hawai'i 96813

Aloha Senate President Kouchi, Speaker Nakamura, and Members of the Legislature:

Pursuant to HRS section 27-43.6, which requires the Chief Information Officer to submit applicable independent verification and validation (IV&V) reports to the Legislature within 10 days of receiving the report, please find attached the report the Office of Enterprise Technology Services received for the State of Hawai'i, Department of Attorney General (AG), Child Enforcement Agency (CSEA).

In accordance with HRS section 93-16, this report may be viewed electronically at <a href="http://ets.hawaii.gov">http://ets.hawaii.gov</a> (see "Reports").

Sincerely,

Christine M. Sakuda Chief Information Officer State of Hawai'i

MONTHLY IV&V REVIEW REPORT

September 30, 2024 | Version 1.0

## **Table of Contents**

### **EXECUTIVE SUMMARY**

Background	3
IV&V Dashboard	4
IV&V Summary	5
Preliminary Observation(s)	N/A

### **IV&V OBSERVATIONS**

Appendix A: IV&V Criticality and Seventy Ratings	/
Appendix B: Industry Standards and Best Practices	9
Appendix C: Prior Findings Log	12
Appendix D: Comment Log on Draft Report	20

## **BACKGROUND**

The State of Hawaii (State), Department of Attorney General (AG), Child Support Enforcement Agency (CSEA) contracted Protech Solutions, Inc. (Protech) on October 2, 2023, to replatform the KEIKI System and provide ongoing operations support. Protech has subcontracted One Advanced and DataHouse to perform specific project tasks related to code migration, replatforming services, and testing. Department of AG contracted Accuity LLP (Accuity) to provide Independent Verification and Validation (IV&V) services for the project.

Our initial assessment of project health was provided in the first Monthly IV&V Review Report as of October 31, 2023. Monthly IV&V review reports will be issued through September 2024 and build upon the initial report to continually update and evaluate project progress and performance.

Our IV&V Assessment Areas include People, Process, and Technology. Each month we will select specific IV&V Assessment Areas to perform more focused IV&V activities on a rotational basis.

The IV&V Dashboard and IV&V Summary provide a quick visual and narrative snapshot of both the project status and project assessment as of September 30, 2024. Ratings are provided monthly for each IV&V Assessment Area (refer to Appendix A: IV&V Criticality and Severity Ratings). The overall rating is assigned based on the criticality ratings of the IV&V Assessment Categories and the severity ratings of the underlying observations.

TEAMWORK AND PERSERVERANCE

"Teamwork makes the dream work."

- John C. Maxwell

# PROJECT ASSESSMENT

September 2024

## **SUMMARY RATINGS**

### **OVERALL RATING**

Deficiencies were observed that merit attention. Remediation or risk mitigation should be performed in a timely manner.

## **IV&V OBSERVATIONS**

## **KEY PROGRESS & RISKS**

- The UI refinement plan reached 84% completion and is under review.
- Testing report metrics improved this month to include overall performance metrics providing more transparency on project progress reducing in severity to low.
- There is one blocker remaining to the final decision on test data delivery, date/time issue. The key decision on selection of the method for performing data extracts is pending.
- The project schedule is contingent upon the resolution of the data delivery testing method. Increased project risk has been noted.

# SEPTEMBER 2024 · KROM PROJECT

JULY	AUG	SEPT	IV&V ASSESSMENT AREA	IV&V SUMMARY
•	Y	Y	Overall	Project Schedule: There are increased concerns for schedule slippage if the following blocker is not immediately addressed. The blocker is: the Date/Time issue.  Once this blocker is resolved a key decision on test data delivery can be concluded.  Project Costs: Contract invoices received to-date are within total contract costs.  Quality: The testing status reports have significantly improved to provide transparency for metrics which assists CSEA in tracking real time progress. Regular risk meetings are held every other week, in which the project schedule for upcoming deadlines and activities are tracked and presented.  Project Success:  The Paternity Establishment workshop completed on time, contributing to the development of the SIT scripts for that functional area.  Locate Workshop and the associated test scripts were 85% complete, with final submissions planned for the end of the month.  The overall SIT script development phase for other areas is well on its way, ensuring that critical workflows are being defined and tested early.  KEIKI code version 1.0.0.11 was delivered on September 19, 2024 which marks a critical milestone in ensuring that the system remains stable as new features and fixes are introduced.  Batch Execution Review and Plan was completed by September 24, 2024.
G	G	G	People Team, Stakeholders, & Culture	<ul> <li>The Monthly Steering Committee (ESC) convened in September, and the CSEA Project Manager played an active role in presenting project risks and key success metrics (2023.10.002 and 2024.03.002).</li> <li>Project team members are working collaboratively to make progress in the system testing phase. They are actively addressing questions and issues that arise during the testing process.</li> <li>CSEA and Protech continue to work together to refine the data extraction process, enhance the effectiveness of data validation and meet daily to resolve data challenges, focusing on optimization of extraction times to minimize downtime during system cut-over (2024.06.001).</li> <li>CSEA continues to meet monthly with external Departments and works with Protech to identify external project stakeholders and communication activities.</li> <li>ETS' new Chief Data Officer is in the process of focusing on data governance policies and interface concerns with the EFS team. This is an ongoing effort as the project evolves and subsystems are tested. (2024.07.001.R1).</li> </ul>

# SEPTEMBER 2024 · KROM PROJECT

JULY	AUG	SEPT	IV&V ASSESSMENT AREA	IV&V SUMMARY
		Y	Process Approach & Execution	<ul> <li>Weekly Meetings: The team continues to have weekly recurring meetings where the Protech PM provides status updates, describing the current focus of the week, updates on production test data, system testing, user interface, as well as updates on schedule, delivery status, key decisions, and change requests.</li> <li>Risks continue to be logged and actively discussed during weekly risk meetings, utilizing a RAID log to track risks, actions, issues, and decisions, with updates written for each item.</li> <li>The project is actively addressing data extraction discrepancies, including Date/Time issues in SQL-replicated data. Progress is being made with daily collaboration between CSEA and DDI, and the obfuscated database was delivered to IBM for further verification (2024.08.001.R1).</li> <li>There were no reported updates for binary and ASCII file handling in September to understand whether any mitigations are necessary (2024.08.001.R3).</li> <li>CSEA is working with Protech to finalize the method of test data delivery. This will be recorded as a Key Decision once finalized, based on resolving the Date/Time issue. The packed binary cell issue has been resolved. The batch validation test, scheduled with July 1 data, is set to confirm the output consistency between the refactored environment and the legacy system. Although progress has been made toward addressing data consistency issues, full end-to-end validation is not yet complete (2024.08.001.R2).</li> <li>The shared mainframe resource issue remains a concern, but CSEA is actively evaluating a SQL replication strategy to improve data extraction efficiency, with the recommendation remaining open until a full resource assessment and validation of the alternatives are completed (2024.08.001.R4).</li> </ul>
<b>(V)</b>	•	V	Technology System, Data, & Security	<ul> <li>The data extraction process remains delayed due to shared mainframe resources, inefficient extraction programs, and long download/upload times. While CSEA aimed to validate the SQL replication strategy by July 31st, this goal was not met due to Date/Time issues in the ADABAS source tables. Progress has been made through daily collaboration between CSEA and DDI to resolve these issues (Observation ID 2024.06.001).</li> <li>The UI Refinement Plan is under review, and a Proof of Concept is in progress. The obfuscated database was successfully delivered to IBM, marking progress in the verification of data extraction and conversion (Observation ID 2024.06.001).</li> <li>Batch execution planning using July 1st data continues, helping to ensure data consistency (Observation ID 2024.06.001). There have been no specific updates on binary and ASCII file handling, but risk management for data extraction remains aligned with overall mitigation efforts (Observation ID 2024.06.001).</li> <li>Backup and restore testing continues to ensure system reliability, with a recommendation for early resource and space assessments (Observation ID 2024.06.001). Additionally, the weekly testing report tracks test cases and defects, but it is recommended to include more detailed metrics, such as percentage of completion and failure resolution forecasts, for better risk management (Observation ID 2024.08.001).</li> </ul>

## Appendix A: IV&V Criticality and Severity Ratings

#### **IV&V CRITICALITY AND SEVERITY RATINGS**

Criticality and severity ratings provide insight on where significant deficiencies are observed and immediate remediation or risk mitigation is required. Criticality ratings are assigned to the overall project as well as each IV&V Assessment Area. Severity ratings are assigned to each risk or issue identified.

#### TERMS

#### **RISK**

An event that has not happened yet.

#### **ISSUE**

An event that is already occurring or has already happened.

#### **Criticality Rating**

The criticality ratings are assessed based on consideration of the severity ratings of each related risk and issue within the respective IV&V Assessment Area, the overall impact of the related observations to the success of the project, and the urgency of and length of time to implement remediation or risk mitigation strategies. Arrows indicate trends in the project assessment from the prior report and take into consideration areas of increasing risk and approaching timeline. Up arrows indicate adequate improvements or progress made. Down arrows indicate a decline, inadequate progress, or incomplete resolution of previously identified observations. No arrow indicates there was neither improving nor declining progress from the prior report.

A YELLOW, medium criticality rating is assigned when deficiencies were observed that merit attention. Remediation or risk mitigation should be performed in a timely manner.

A **GREEN**, low criticality rating is assigned when the activity is on track and minimal deficiencies were observed. Some oversight may be needed to ensure the risk stays low and the activity remains on track.

A GRAY rating is assigned when the category being assessed has incomplete information available for a conclusive observation and recommendation or is not applicable at the time of the IV&V review.

#### **Severity Rating**

Once risks are identified and characterized, Accuity will examine project conditions to determine the probability of the risk being identified and the impact to the project, if the risk is realized. We know that a risk is in the future, so we must provide the probability and impact to determine if the risk has a Risk Severity, such as Severity 1 (High), Severity 2 (Moderate), or Severity 3 (Low).

While a risk is an event that has not happened yet, an issue is something that is already occurring or has already happened. Accuity will examine project conditions and business impact to determine if the issue has an Issue Severity, such as Severity 1 (High/Critical Impact/System Down), Severity 2 (Moderate/ Significant Impact), or Severity 3 (Low/Normal/Minor Impact/ Informational).

Observations that are positive, preliminary concerns, or opportunities are not assigned a severity rating.

**SEVERITY 1:** High/Critical level

**SEVERITY 2:** Moderate level

**SEVERITY 3:** Low level

### **TERMS**

#### **POSITIVE**

Celebrates high performance or project successes.

## PRELIMINARY CONCERN

Potential risk requiring further analysis.

Process	2024.03.002	Issue	Moderate	Moderate	Inadequate schedule and resource management practices may lead to project delays, missed project activities, unrealistic	The overall project end date and Go-Live date is projecting a 17-day variance due to the delay in the assessment validation which was completed in February. It is crucial for the Protech and CSEA project managers to both take active roles in tracking and monitoring project activities, especially delayed and upcoming tasks, to collaborate on ways to get the project back on track.  Although the project metrics are showing a 17-day variance, some project tasks are delayed 1 to 2 months from the approved baseline including building the KEIKI database, developing system test scripts, UI design, UI development, code conversion, system test execution, etc. CSEA should have a clear understanding of the impact of delays on the overall timeline and validate the 17-day schedule variance.	o 2024.03.002.R1 – Based on the complexity of the KEIKI project, review and refine the schedule regularly with detailed tasks, realistic durations, and adequate resources.  The project managers should meet weekly to discuss the project schedule, continue to identify detailed-level tasks based on high-level timelines, and identify schedule and resource related risks.  The CSEA project manager should conduct independent reviews of the schedule and project metrics, proactively communicate upcoming State tasks to CSEA stakeholders, create State specific	Closed	04/30/24: Project managers started meeting regularly to review the project schedule. The project managers will do a deeper analysis of the upcoming technical tasks, and then recalibrate the project schedule in May.  05/31/24: Protech delivered a draft of the replanned project schedule and analysis for CSEA's feedback and approval. The revised schedule maintains the original Go-Live date.  06/30/24: Issue closed. The schedule was updated and the 17-day variance was successfully mitigated, ensuring the project remained on track. The project schedule continues to be discussed weekly.  IV&V encourages the CSEA PM to conduct independed reviews of the schedule and project metrics. IV&V will continue to monitor progress made on schedule and resource management practices.	6/30/2024	The schedule was updated and the 17-day variance was successfully mitigated, ensuring the project remained on track. The project schedule continues to be discussed weekly.
Process	2024.02.001	Preliminary	N/A	N/A	Additional information is needed regarding Protech's program development and testing approach.	In February, Protech delivered the System Requirements Document and Test Plan which are still under review. CSEA already provided a number of comments for both deliverables requesting additional clarification or additional documentation. Both deliverables do not provide sufficient understanding of Protech and One Advanced's approach for the program development and testing phase. There need to be a clearer mutual understanding of how Protech's development and testing approach will ensure that the new system and user interface will maintain the sam functionality, data, and system interfaces as the old system. The System Requirements Definition deliverable is high-level documentation of items such as source code, data component, audin interface tables but does not actually capture the required functionality using industry standard format for requirements. Documenting requirements is especially important for the development of the new front-end user interface (UI). The System Requirements Definition deliverable included a User Interface section but does not include sufficient information regarding UI requirements. Protech has another UI Refinement plan deliverable due in May 2024, however, it is unclear if UI requirements will be included in that deliverable.  If system requirements will not be used to manage development of UI as well as replatforming and refactoring of code work, then it is important to understand how Protech and One Advanced are planning to manage and report on development progress. Additionally, without documented system requirements, testing will be even more critical for identifying gaps in or issues with functionality during the development process. CSEA also has a number of comments and questions on the Protech Test Plan deliverable. In addition to the System Test Plan, Protech is developing an Acceptance Test Plan (UAT Plan) deliverable due in April 2024 which may help to provide additional clarification of the comprehensive testing strategy and delineation of testing responsibilities betwe	is e	Closed	03/31/24: Protech is planning on a presentation in April or May to explain how their testing approach will ensure that the new system and user interface will maintain the same functionality as the old system. Without documented requirements, it is still unclear how program development progress, testing, and acceptance will be managed and monitored.  04/30/24: Protech will present their testing approach in May. The presentation is important as test scripts are finalized, and system testing is approaching.  05/31/24: Protech's testing approach presentation was pushed back to June. The presentation is critical as test scripts are finalized and system testing begins in June.  06/30/24: Preliminary closed. CSEA acknowledged the risk associated with not having defined UI system requirements. Instead, the test scripts are used as the requirements. The teams collaborate closely and hold regular test meetings to ensure alignment and thorough testing.  IV&V will continue to monitor the clarification of the program development and testing approach.	6/30/2024	CSEA acknowledged the risk of not having defined UI system requirements and addressed it by using test scripts as the requirements. Additionally, the teams collaborated closely and held regular test meetings to ensure alignment and thorough testing. This approach mitigates the risk by ensuring that the testing process is comprehensive and that any issues are promptly identified and resolved through ongoing communication and collaboration.

ASSESSMENT AREA	OBSERVATION ID	TYPE	ORIGINAL SEVERITY	CURRENT SEVERITY	OBSERVATION	ANALYSIS	RECOMMENDATIONS	STATUS	STATUS UPDATE	CLOSED DATE	CLOSURE REASON
Process	2024.01.001	Risk	Moderate	Low	Ineffective project status meetings and reports can lead to delayed decision-making, lack of accountability, and reduced morale.	Weekly status reports are provided with a dashboard of the project status, high level schedule, late tasks, tasks planned this week, open tasks, 30-day look ahead, deliverable status, risks log, key decisions, change requests, and other project information. Despite numerous data points, the weekly project status reports may not give a complete picture of the project's progress. To get a better understanding of any delays, risks, issues, or action items, additional research and analysis of past reports, review of the Microsoft Project schedule, and inquiry with project members is necessary. For example, late project deliverables may be listed as simply "in progress"; however, one is unable to determine how many additional days the deliverable was pushed back without checking the previous weekly status report and the reason for additional time is not discussed or disclosed.	that actively engage team members and highlight key information		02/29/24: A new recommendation was added and two recommendations were closed. Two recommendations were closed as CSEA and Protech worked together to improve project status reports to be more clear, meaningful, and relevant to the audience. The streamlined status reports are facilitating greater understanding and allowing more time for meaningful discussion amongst project stakeholders.  03/31/24: Although improvements were made to project status reports, they could be further improved by outlining delayed task and upcoming activities to ensure stakeholders are adequately prepared. CSEA continued to refine success metrics to prepare for reporting which will begin next month.  04/30/24: Accuity closed two recommendations. Project status reports continue to be refined and now clearly report tasks that have been rescheduled from the previous week's reporting period. CSEA did not start reporting on success metrics in April as planned.  05/31/24: Accuity decreased the severity rating from Level 2 (Moderate) to Level 3 (Low). The CSEA PM presented some of the project's key success metrics at the May Steering Committee Meeting. High-level pre-delivery testing metrics were provided in May.  06/30/24: Risk closed. As system testing started in June, the team started adding a Weekly Test Report. The report outlines the testing scope, the defects that were retested and validated, and gives a summary of the progress of all test cases.  IV&V will continue to assess the effectiveness of project status reports and meetings.		Test reports were added to the weekly status meetings. The report contains testing and defect metrics.

			ORIGINAL	CURRENT							
ASSESSMENT AREA Technology		Positive	SEVERITY Moderate	SEVERITY N/A	OBSERVATION The Automated Application Assessment process was well planned and executed.	ANALYSIS  Protech's partner, Advanced, worked closely with CSEA's technical SMEs and outlined a clear, well-defined process to collect and assess the KEIKI mainframe application in preparation for the migration and code conversion. Advanced's weekly status updates and follow-ups helped all stakeholders understand their roles, responsibilities, outstanding tasks, and status of activities. Their final assessment report was comprehensive, data-driven and insightful, and prepared the project team well as they begin the next phase of legacy code and data system migration.	RECOMMENDATIONS N/A	Closed	N/A	01/31/24	Closed as this is a positive observation.
Technology	2023.11.001	Risk	Moderate	Moderate	Complex data system migration requirements, combined with incomplete documentation and the absence of a formalized process for non-code tasks, may lead to project delays, unmet contract requirements, and quality issues.	Data system migration and mapping can be complex and cause project delays if not properly planned and managed. The KEIKI system's incomplete documentation and multitude of jobs, workflows, interfaces, and interface files pose a risk of overlooking certain elements, making it challenging to track and validate migration requirements.  The project lacks a formalized process for non-code tasks in the data system requirements collection, migration, and validation activities. The project has a formalized process for application code migration but lacks a clear process for gathering non-code and ancillary elements including hardware, software, interfaces, and batch files. The absence of a separate, formalized process and reliance on manual processes using Excel worksheets may result in data loss, poor quality, and technical issues affecting system performance and user experience.  The SI's waterfall approach requires upfront gathering and definition of all requirements in a linear sequence. Late identification of data system migration requirements may result in insufficient time or budget to execute the migration properly.	migration plans and processes for non-code elements.  • A separate implementation plan should be clearly outlined,	5	12/31/23: CSEA appointed two dedicated Data System Migration Leads. It is unclear if Protech also appointed a dedicated lead. A clear plan is still missing, and CSEA documented a formal issue related to the lack of information coordination and redundant requests related to the data system migration requirements.  01/31/24: Risk closed as the inventory of non-code and ancillary elements including hardware, software, interfaces, and batch files was completed and will be validated as part of the technical architecture and system requirements documentation.		Risk closed as the inventory of non-code and ancillary elements was completed.
People	2023.10.001	Positive	N/A	N/A	The project team members are engaged and the environment between Protech and CSEA is collaborative.	The CSEA SMEs appear to be engaged in ongoing Assessment sessions and accountable for timely completing required tasks, providing information, and responding to questions. The project team members regularly seek feedback, input, and clarification in an open and respectful manner. The experience and knowledge of Protech team members combined with the dedication and high level of engagement from CSEA SMEs support the positive project team environment.	N/A	Closed	N/A	11/30/23	Closed as this is a positive observation.
